MESSAGE

Education is at the heart of an equitable and inclusive society. The need for an objective assessment of quality education in schools can hardly be over emphasized. PARAKH Rashtriya Sarvekshan 2024 is a significant step in this direction. Unlike the earlier traditional assessments, this survey offers a more detailed picture of what students are learning and how teaching in school systems are supporting the learning process across the country.

The survey provides meaningful insights into classroom practices, teacher's professionalism, and the curriculum implementation by focusing on students' competencies in core subjects and essential skills. With data collected from over 21 lakh students in 74,229 schools, it gives us an opportunity to identify learning gaps, spot regional trends, and highlight practices that are working well.

This initiative aligns with the goals of the National Education Policy (NEP) 2020, which encourages schools to promote creativity, critical thinking, and a more student-centred approach to education. PARAKH Rashtriya Sarvekshan 2024 is a step in that direction-helping us assess and improve what we do in our classrooms every day.

All the teachers, students, school leaders, and officials involved in this exercise deserved to be commended. Their participation and commitment to quality education are truly praiseworthy. I hope this survey findings are used widely and thoughtfully to help build a more equitable, effective, and responsive education system.

(Dharmendra Pradhan)

School education lies at the heart of a nation's progress—it is where foundational values, skills, and aspirations are shaped. The PARAKH Rashtriya Sarvekshan 2024 represents a major step forward in our national journey to strengthen school education through a more informed, inclusive, and responsive approach.

This pioneering initiative goes beyond conventional assessments. It seeks to understand not just what students know, but how schools, teachers, and the broader education system are enabling meaningful learning. By doing so, it reflects a deep commitment to equity, quality, and continuous improvement across all layers of our school education landscape.

What sets PARAKH apart is its ability to empower every stakeholder—from classroom teachers who refine their methods based on feedback, to policymakers who draw on robust data to guide reforms, to community members who advocate for better learning environments. The emphasis on real-world competencies and systemic understanding ensures that assessments are not endpoints, but starting points for responsive and relevant educational action.

The insights from this nationwide survey provide an opportunity to deepen local engagement, design district-specific action plans, and address context-specific challenges. It invites us to move beyond scores and averages and instead pursue holistic, evidence-based solutions that uplift every learner and every region.

PARAKH Rashtriya Sarvekshan 2024 is more than a survey—it is a shared vision for a stronger, more equitable education system. As we move forward, let this effort serve as a foundation for collaboration, innovation, and unwavering commitment to nurturing the potential of every child through high-quality school education.

MESSAGE

PARAKH Rashtriya Sarvekshan 2024 is a significant step forward in our ongoing efforts to assess and enhance the quality of education in India. This national survey marks a significant milestone in our journey towards educational excellence, reflecting our unwavering commitment to the transformative goals set forth by the National Education Policy (NEP) 2020.

The NEP 2020 envisions an education system that is holistic, flexible, multidisciplinary, and aligned with the needs of the 21st century, aiming to bring out the unique capabilities of each student. Central to this vision is the emphasis on competency-based learning and assessment, ensuring that our students not only acquire knowledge but also develop critical thinking, problem-solving abilities, and a love for lifelong learning. PARAKH Rashtriya Sarvekshan 2024 assessed these competencies across diverse stages of schooling, providing us with invaluable insights into the effectiveness of our educational interventions.

The findings from PARAKH Rashtriya Sarvekshan 2024 help identify both our achievements and the challenges that lie ahead. They provide a clear roadmap for targeted interventions, enabling us to channel our resources and efforts where they are most needed. Moreover, this survey fosters a culture of accountability and continuous improvement, encouraging educators, administrators, and policymakers to collaborate effectively in enhancing the competencies of our students.

Moving beyond the assessment itself, the next phase of this initiative is focused on enabling systemic action. To facilitate this, a comprehensive multi-level strategy has been planned to translate the findings of the PARAKH Rashtriya Sarvekshan 2024 into meaningful actions. This includes a phased dissemination of data through workshops at the national, regional, state, and district levels. These workshops will focus not only on understanding the survey results but also on preparing district-specific roadmaps, where roles and responsibilities are clearly defined. A layered set of interventions—short-, mid-, and long-term—will support this process. These range from teacher training and community engagement to the development of intervention handbooks, digital learning materials, and a Management Information System for continued data use. The integration of survey insights into Annual Work Plans and Budgets (AWPBs) will help embed these efforts into ongoing planning cycles, ensuring that the survey serves as a lever for sustained system strengthening.

Let us celebrate our successes, learn from our shortcomings, and renew our commitment to providing an education that equips our students to navigate and contribute positively to an ever-evolving world.

Shri Anandrao V Patil
Additional Secretary

Department of School
Education & Literacy,
Ministry of Education
Government of India

MESSAGE

Education is not just about imparting knowledge; it is about nurturing minds, shaping perspectives, and equipping students with the skills to navigate an ever-changing world. The PARAKH Rashtriya Sarvekshan 2024 serves as a critical initiative that helps us understand how well we are achieving these objectives. By assessing students' competencies across various educational stages, this survey enables us to measure learning outcomes, evaluate educational policies, and enhance the teaching-learning process in schools across the country.

One of the most significant contributions of this initiative is its role in bridging the gap between assessment and action. The findings from the PARAKH Rashtriya Sarvekshan provide an accurate reflection of student performance, allowing for targeted interventions that cater to the diverse learning needs of children across geographies, socio-economic backgrounds, and linguistic diversities. Furthermore, the survey brings into focus the importance of teacher training, curriculum refinement, and pedagogical innovations in improving learning outcomes.

The National Education Policy 2020 advocates for a shift toward competency-based education, where learning is not just about memorization but about understanding, application, and problem-solving. This survey plays a key role in evaluating this transition, ensuring that students are not only absorbing knowledge but also developing critical skills that will prepare them for future academic and professional challenges.

As we move into the implementation phase, the focus shifts to helping states and districts make effective use of the findings through structured and responsive planning. The post-survey interventions are being designed to support this shift, beginning with detailed workshops that bring together local education officials, academic experts, and practitioners to examine their district-level data in depth. These workshops will inform the creation of action-oriented district plans, tailored to address specific learning needs. Alongside these efforts, practical tools are being developed, such as subject- and stage-specific handbooks, orientation guides for training functionaries, and digital resources, to assist teachers and school leaders in translating insights into instructional practices. The emphasis is on usability, clarity, and adaptability, so that those at the frontlines of education have what they need to respond effectively. These initiatives are not isolated but are being integrated with broader administrative cycles, such as state academic planning and budgeting, to ensure coherence and long-term continuity in interventions.

I would like to express my sincere gratitude to the Secretary (Department of School Education & Literacy), the State Project Directors (SPDs), Directors of SCERTs, and the Principals of State Institutes of Education (SIEs) for their tireless efforts in facilitating the successful execution of this nationwide assessment. Their leadership, commitment, and coordination have been invaluable in ensuring that this initiative reaches schools across the country.

I also extend my gratitude to Central Board of Secondary Education (CBSE) for their valuable support in facilitating the administration of the PARAKH Rashtriya Sarvekshan 2024. Their cooperation in ensuring smooth coordination and execution has contributed to the successful completion of this large-scale assessment.

Research and Training

FOREWORD

Education serves as the foundation for a nation's progress, and ensuring its quality, accessibility, and relevance is a continuous endeavour. PARAKH Rashtriya Sarvekshan 2024 is a significant step in this direction, offering a comprehensive, data-driven insight into student learning outcomes, school environments, and educational effectiveness across India. This initiative reflects our commitment to evidence-based reforms, providing key findings that will guide future educational strategies and help bridge gaps in learning.

In an era of rapid socio-economic and technological transformation, education must equip students with competencies that go beyond rote learning. The focus should be on critical thinking, creativity, problem-solving, and adaptability, ensuring that learners are prepared for a dynamic future. The findings from this survey enable schools, teachers, and policymakers to assess how effectively these competencies are being nurtured at different stages of schooling. By analyzing student performance in language, mathematics, science, and social sciences, alongside teacher training, infrastructure, and pedagogical approaches, the survey provides a holistic overview of the current education landscape.

One of the most valuable aspects of PARAKH Rashtriya Sarvekshan 2024 is its role in facilitating targeted interventions. The data collected does not merely identify learning gaps—it serves as a catalyst for informed decision-making, curricular improvements, and teaching innovations. This approach is essential in ensuring that our education system is inclusive, equitable, and aligned with the principles of competency-based learning as envisioned in NEP 2020.

As we analyze and act upon these findings, our collective goal should be to create an education system that is responsive, forward-thinking, and centered on student development. This requires collaboration among educators, policymakers, and communities to implement meaningful changes that enhance both teaching and learning experiences.

Preface

PARAKH Rashtriya Sarvekshan 2024 is a significant step toward understanding and improving student learning outcomes and overall school effectiveness across India. This nationwide survey serves as a comprehensive reflection of the education system, offering valuable insights into how students at different stages of schooling develop competencies and how various factors contribute to their learning experiences. Designed as a large-scale competency-based assessment, the survey provides a structured analysis of student achievement, teacher preparedness, school infrastructure, and pedagogical practices. Through this initiative, we aim to bridge the gap between policy and classroom realities, ensuring that education remains dynamic, inclusive, and aligned with contemporary learning needs.

At the core of this survey is the principle that education should not only focus on content mastery but also on the development of critical thinking, problem-solving, and application-based skills. By examining student performance in language, mathematics, science, and social sciences, the study highlights both areas of progress and challenges that require targeted interventions. The findings provide a deeper understanding of learning trends across different regions and socio-economic backgrounds, emphasizing the need for a more equitable and responsive education system. The survey also explores how teachers are equipped to facilitate meaningful learning, assessing their engagement with professional development programs, use of technology in teaching, and implementation of innovative classroom strategies. The role of school infrastructure and access to digital learning tools is also examined, underscoring the importance of creating an environment that supports holistic education.

One of the key takeaways from this study is the need to transform data into action. The insights gained from the survey must serve as a foundation for informed decision-making, guiding improvements in curriculum design, teacher training, and resource allocation. The assessment is not merely a measurement of where we stand today but a tool to shape the future of education in the country. Strengthening foundational skills, ensuring inclusive learning opportunities, and fostering an adaptive and innovative approach to teaching will be critical in achieving the objectives envisioned under the National Education Policy (NEP) 2020. The findings also emphasize the importance of integrating technology into

learning processes, addressing regional disparities in student performance, and enhancing social-emotional learning to create a more supportive educational framework.

To ensure that the findings of PARAKH Rashtriya Sarvekshan 2024 lead to meaningful interventions, a multi-level post-survey intervention strategy has been planned. Workshops at the national, regional, state, and district levels will be organized to disseminate results, analyze key insights, and develop targeted action plans. These workshops will bring together education department officials, SCERTs, school leaders, and teachers to collectively interpret the survey results, identify learning gaps, and formulate strategies to strengthen the teaching-learning process. The district-level workshops, in particular, will play a crucial role in enabling local functionaries, including teachers, principals, and community stakeholders, to engage with the findings and develop district-specific interventions. These efforts will help in formulating short-, mid-, and long-term strategies aimed at addressing gaps in student learning and enhancing the overall quality of education.

As we look ahead, PARAKH Rashtriya Sarvekshan 2024 stands as a cornerstone for shaping the future of assessment-driven education in India. The journey toward an inclusive, competency-based, and future-ready education system requires sustained commitment and continuous reflection. Through collaboration and innovation, we can ensure that every learner, regardless of background or location, has access to meaningful learning experiences that empower them for life. It is my hope that this report will serve as a catalyst for positive change, fostering an education system that is both forward-looking and deeply rooted in the principles of equity and excellence.

PARAKH Rashtriya Sarvekshan 2024

PARAKH Rashtriya Sarvekshan 2024 was conducted by PARAKH, NCERT under the aegis of the Department of School Education and Literacy, Ministry of Education, to understand the baseline performance in the development of competencies at the end of the Foundational, Preparatory, and Middle stages at the district level for Grades 3, 6, and 9 respectively. Through Rashtriya Sarvekshan 2024, PARAKH provides a system-level reflection on effectiveness of school education.

State Report: Madhya Pradesh

Languages in which Survey was Administered

ENGLISH, HINDI, SANSKRIT, URDU

Total Number of Schools Participated		
Grade 3	Grade 6	Grade 9
1,992	**1,737**	**2,010**

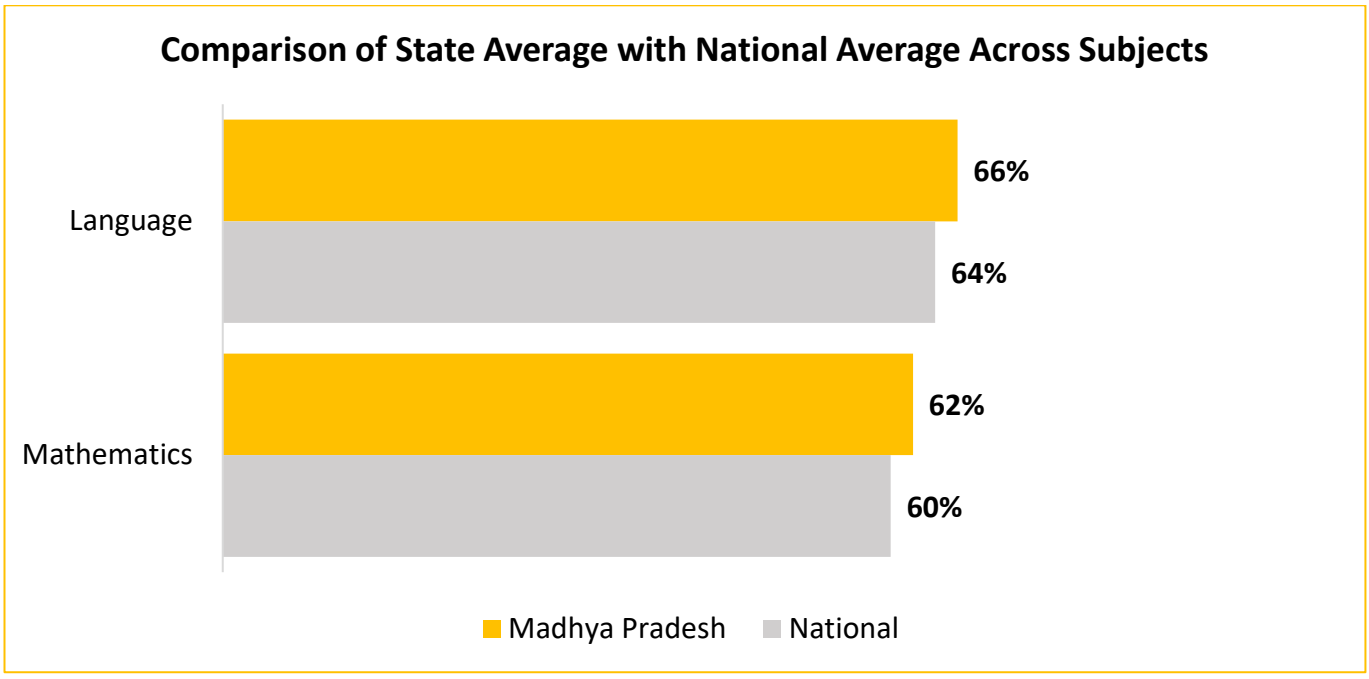

Total Number of Teachers Participated		
Grade 3	Grade 6	Grade 9
4,859	**5,023**	**7,814**

Total Number of Students Participated		
Grade 3	Grade 6	Grade 9
40,479	**42,697**	**55,350**

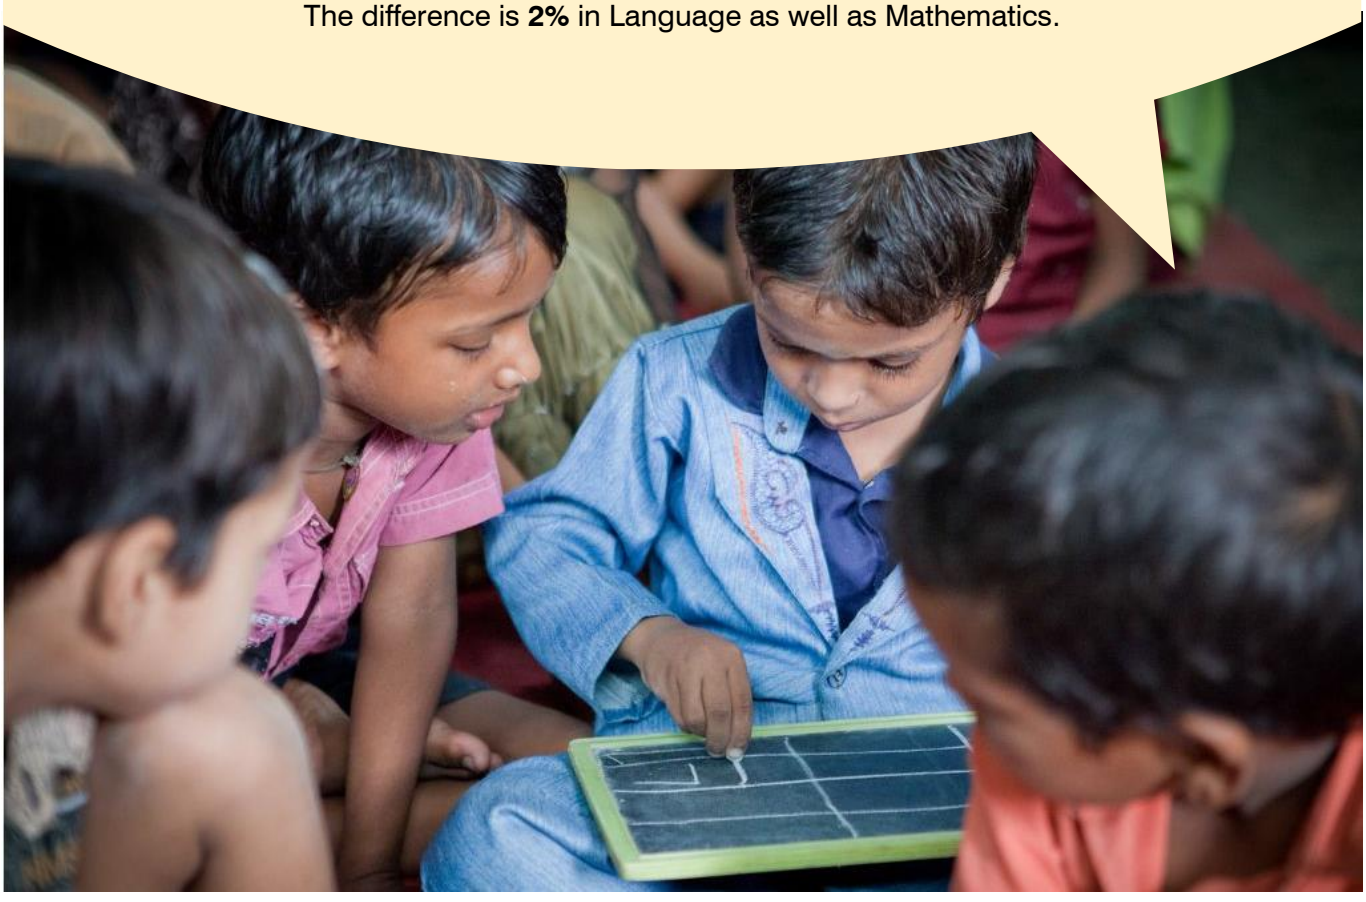

Assessing Foundational Stage Competencies (Grade 3)

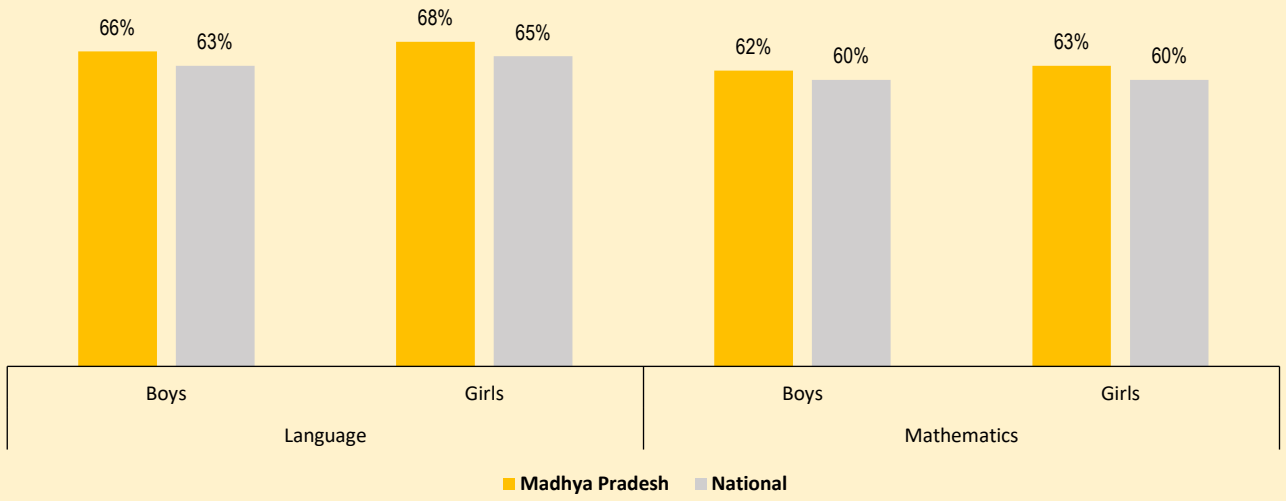

In both **Language** and **Mathematics**, the average performance of students in **Madhya Pradesh** is above the national average.

The difference is **2%** in Language as well as Mathematics.

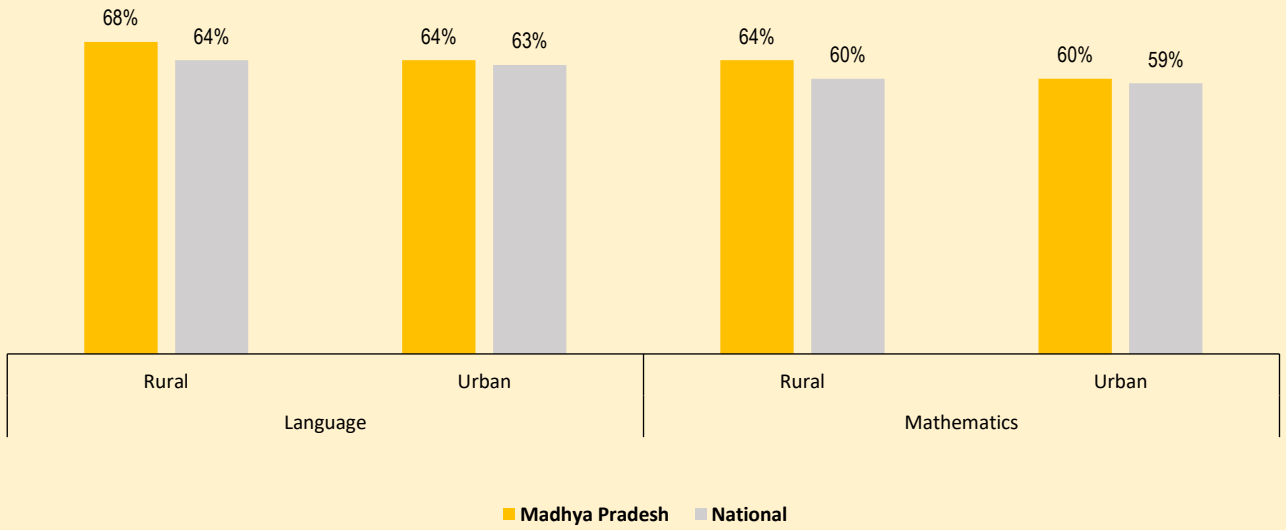

Performance by Gender

Key highlights

- In Language, both boys and girls performed 3% higher than the national average.
- In Mathematics, boys' performance was 2% higher than the national average and girls scored 3% higher than the national average.

Performance by Location

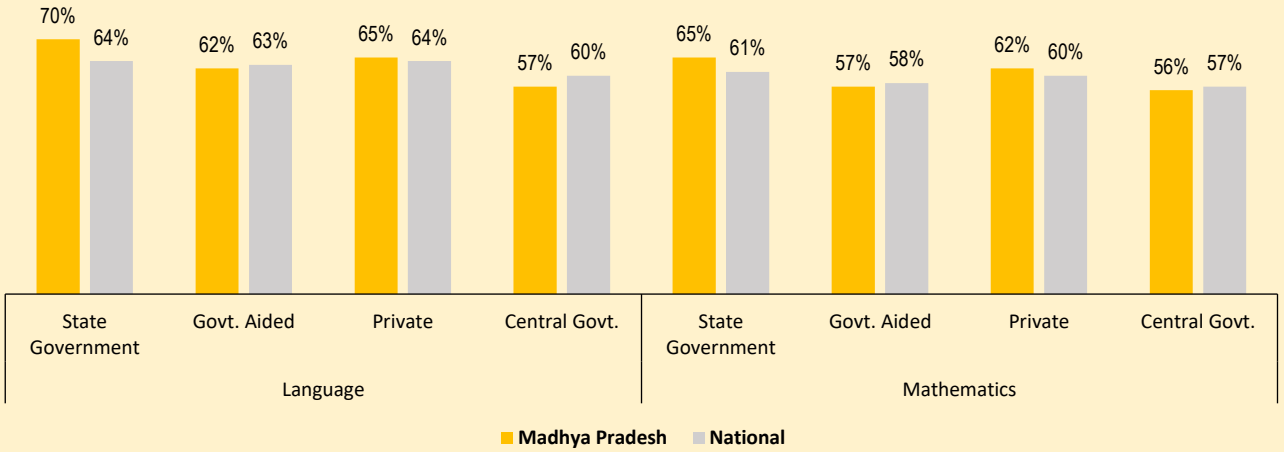

Key highlights

- Students from rural schools performed higher than the national average, with 4% higher score in both Language and Mathematics.
- Students from urban schools performed higher than the national average, with 1% higher score in both Language and Mathematics.

*The mean difference has not been represented statistically.

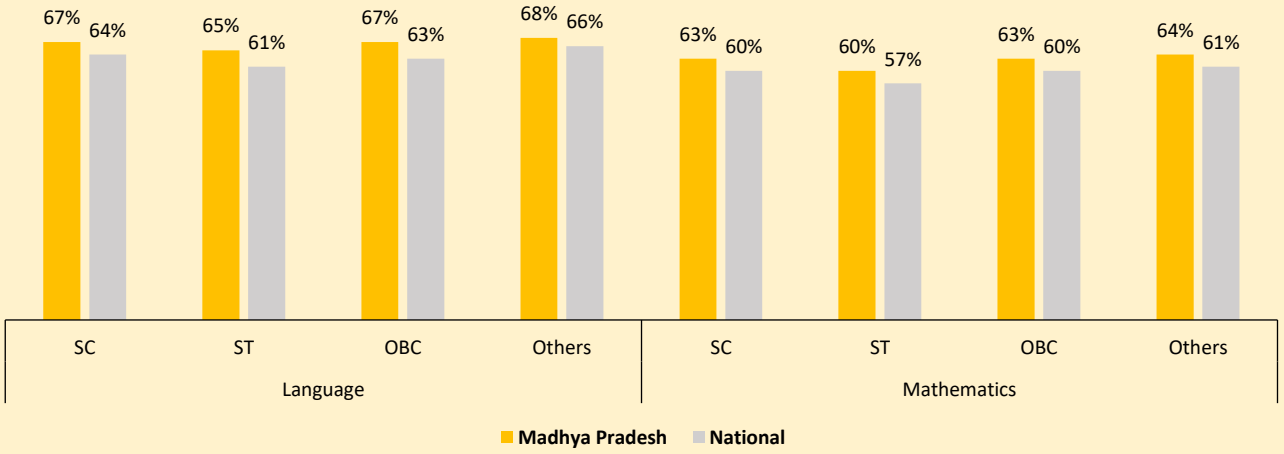

Performance by School Management Type

Key highlights

- State Government schools performed above the national average, with students scoring 6% higher in Language and 4% higher in Mathematics.
- Government-aided schools performed 1% below the national average in both Language and Mathematics.
- Private schools performed above the national average, with students scoring 1% higher in Language and 2% higher in Mathematics.
- Central Government schools performed below the national average, with students scoring 3% lower in Language and 1% lower in Mathematics.

Performance by Social Group

Key highlights

- Among SC students, scores were 3% higher in Language and 3% higher in Mathematics than the national average.
- Among ST students, scores were 4% higher in Language and 3% higher in Mathematics than the national average.
- Among OBC students, scores were 4% higher in Language and 3% higher in Mathematics than the national average.
- Among students from other social groups, scores were 2% higher in Language and 3% higher in Mathematics than the national average.

*The mean difference has not been represented statistically.

Competency-wise Performance (Grade 3)

The tables below show the average percentage of correctly answered questions related to each competency in the state, compared to the national average. For example, in competency C-10.7 (Language, Grade 3) in Madhya Pradesh, the state average of 64% represents the proportion of correctly answered questions, while the national average for same competency was 61%.

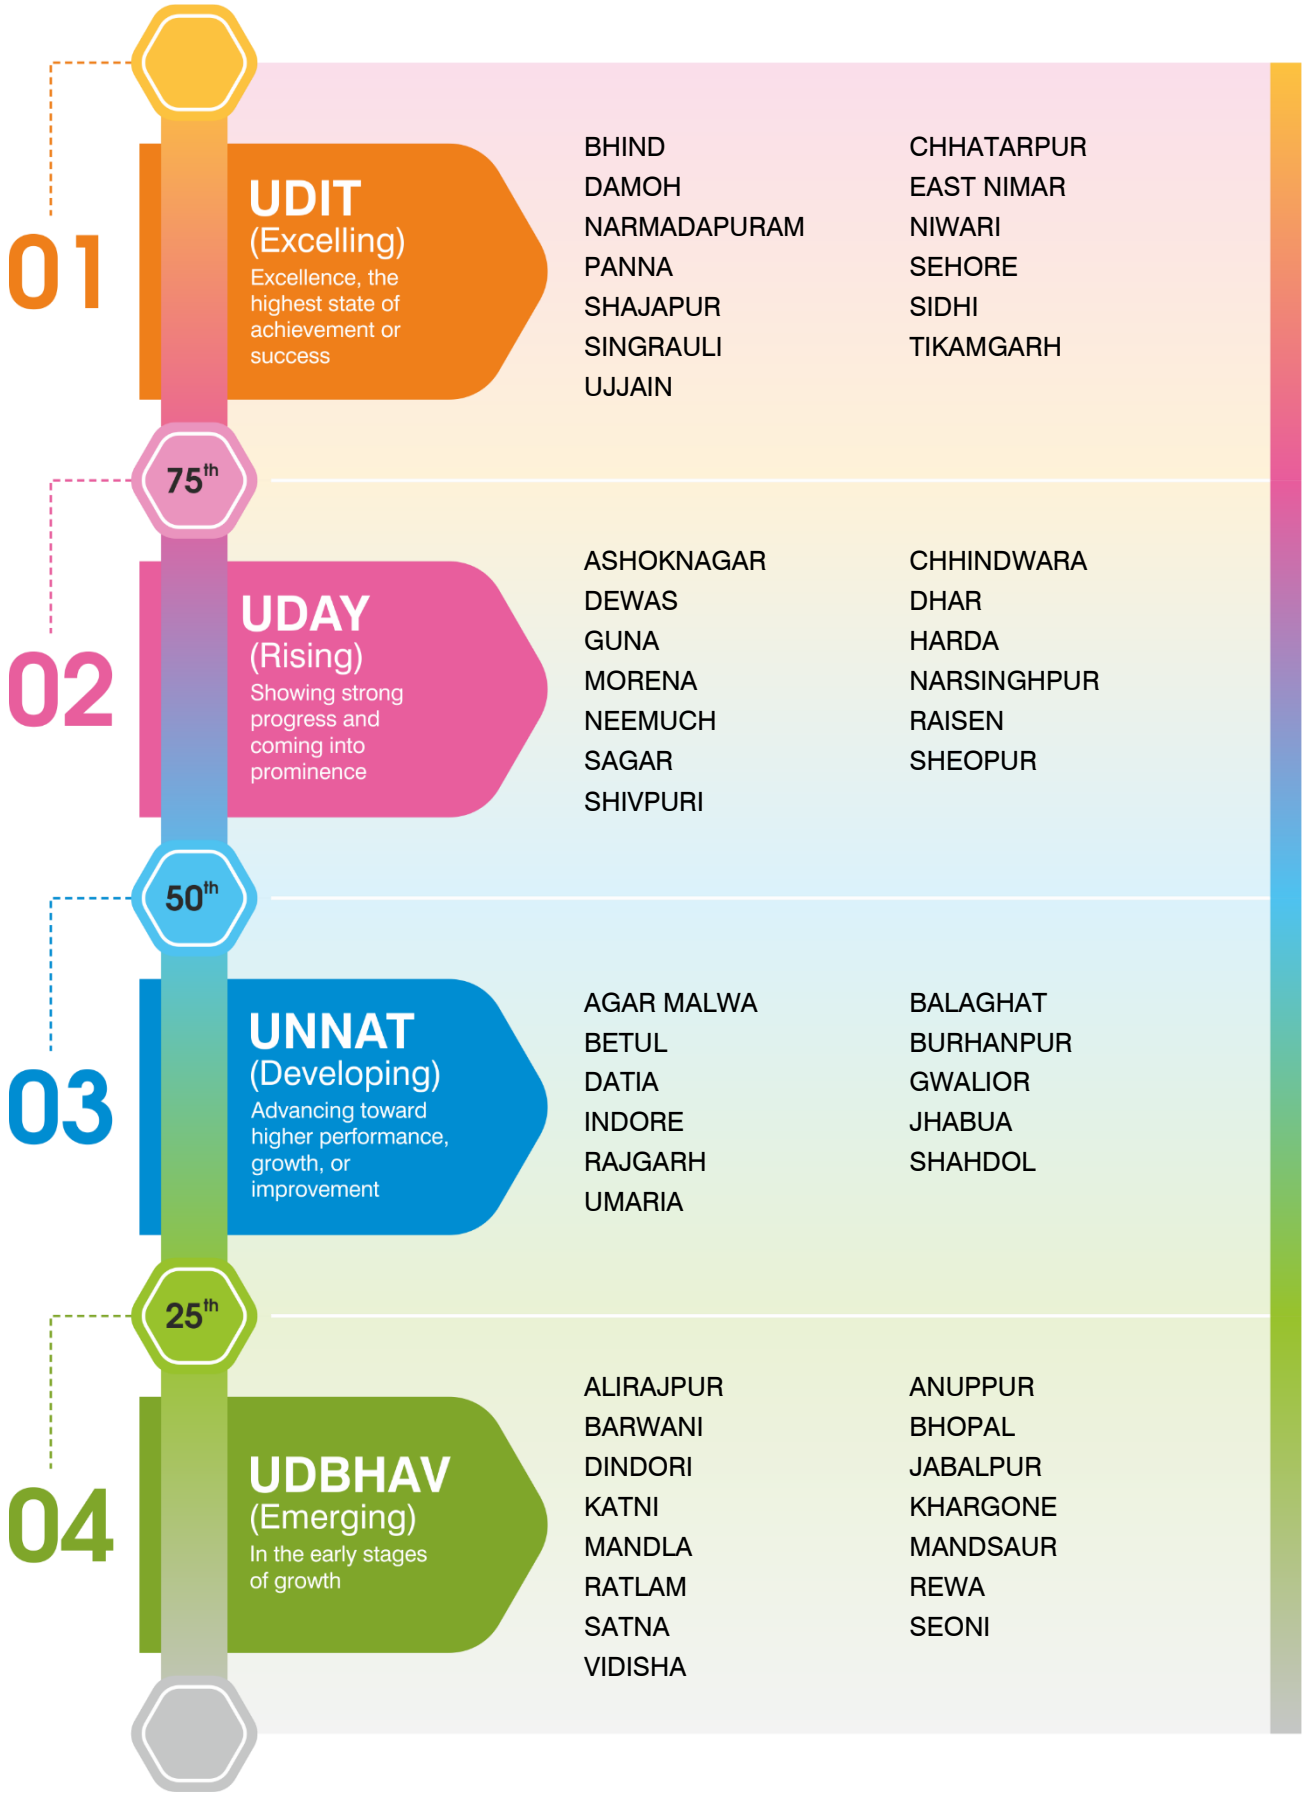

Language

Competency Code	Competency Description	State	National
C-9.7	Knows and uses enough words to carry out day-to-day interactions effectively and can guess the meaning of new words by using existing Vocabulary	70%	67%
C-10.5	Reads short stories and comprehends their meaning - by identifying characters, storyline and what the author wants to say - on their own	63%	60%
C-10.7	Reads and comprehends the meaning of short news items, instructions and recipes, and publicity material	64%	61%

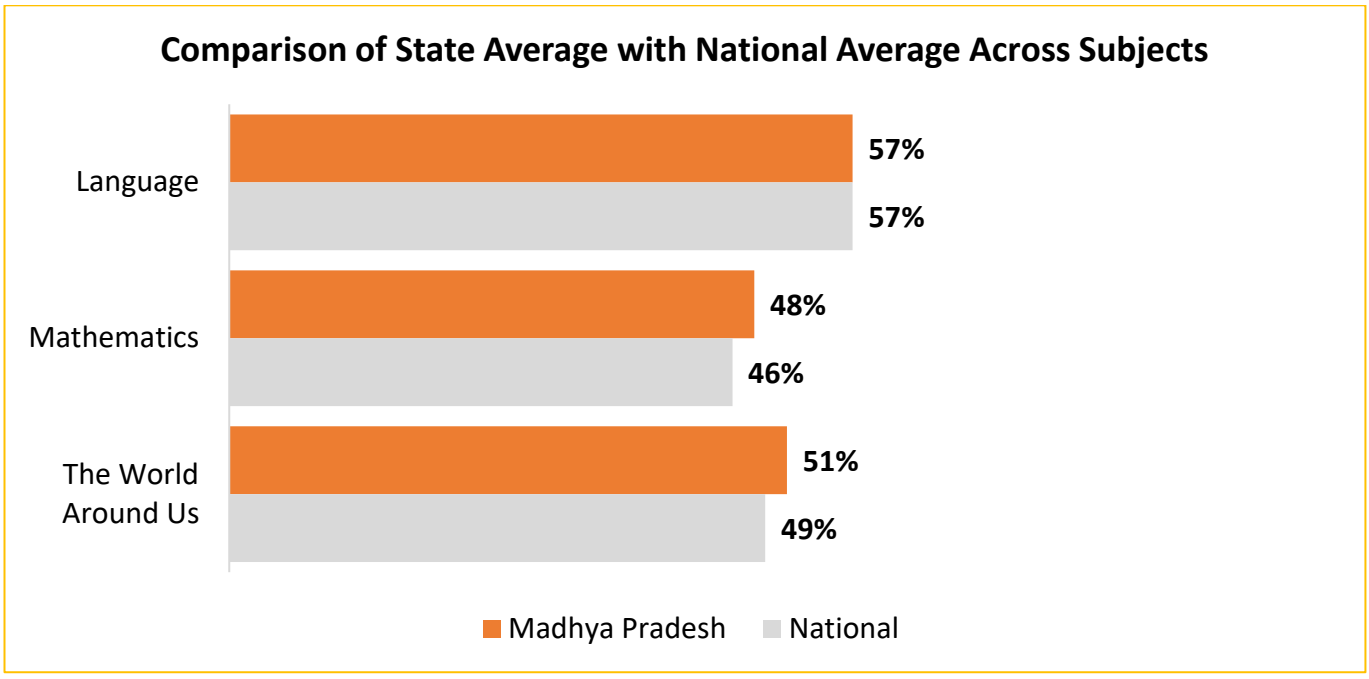

Mathematics

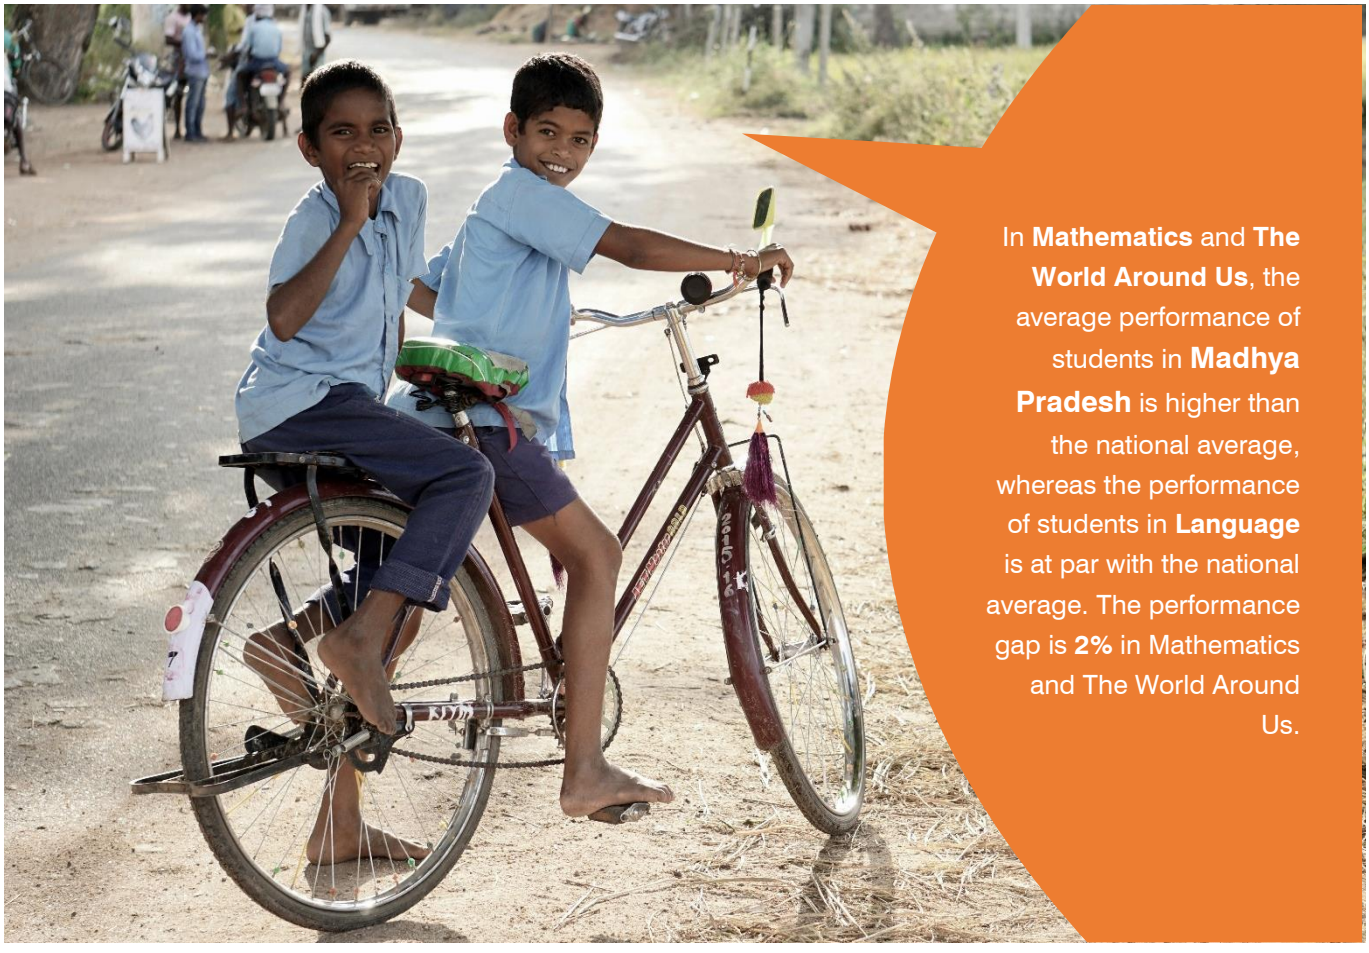

Competency Code	Competency Description	State	National
C-8.1	Sorts objects into groups and sub-groups based on more than one property	69%	68%
C-8.2	Identifies and extends simple patterns in their surroundings, shapes, and numbers	74%	69%
C-8.4	Arranges numbers up to 99 in ascending and descending order	59%	55%
C-8.5	Recognises and uses numerals to represent quantities up to 99 with the understanding of decimal place value system	63%	61%
C-8.6	Performs addition and subtraction of 2-digit numbers fluently using flexible strategies of composition and decomposition of both numerical and word problems	60%	58%
C-8.7	Recognises multiplication as repeated addition and division as equal sharing	58%	54%
C-8.8	Recognises, makes, and classifies basic geometric shapes and their observable properties, and understands and explains the relative relation of objects in space	51%	50%
C-8.9	Selects appropriate tools and units to perform simple measurements of length, weight, and volume of objects in their immediate environment	65%	62%
C-8.10	Performs simple measurements of time in minutes, hours, day, weeks, and months	64%	61%
C-8.11	Performs simple transactions using money up to INR 100	53%	50%
C-8.12	Develops adequate and appropriate vocabulary for comprehending and expressing concepts and procedures related to quantities, shapes, space, and measurements	57%	55%
C-8.13	Formulates and solves simple mathematical problems related to quantities, shapes, space, and measurements	57%	55%

Performance of Districts (in percentile scale) Grade 3

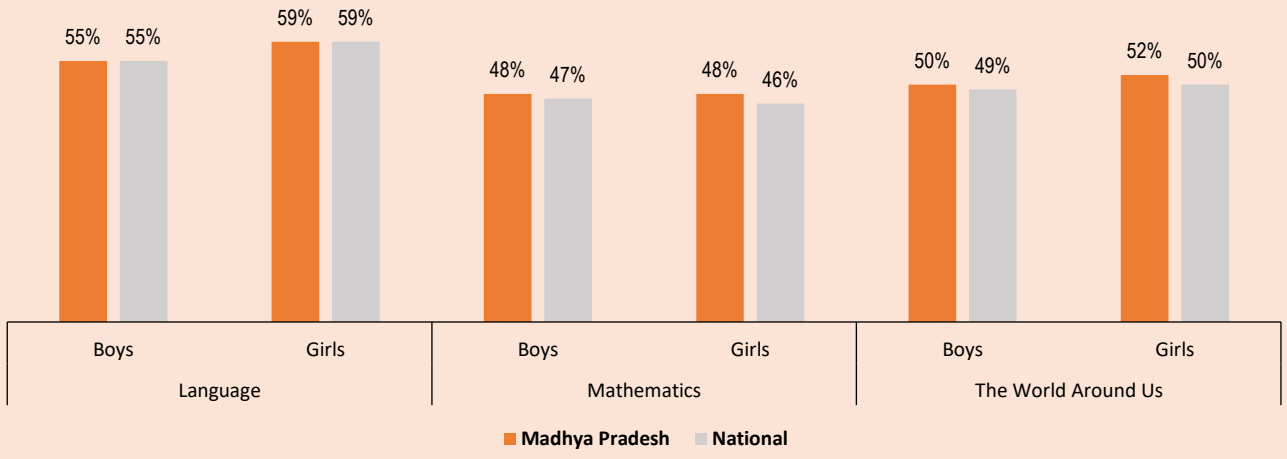

Assessing Preparatory Stage Competencies (Grade 6)

In **Mathematics** and **The World Around Us**, the average performance of students in **Madhya Pradesh** is higher than the national average, whereas the performance of students in **Language** is at par with the national average. The performance gap is **2%** in Mathematics and The World Around Us.

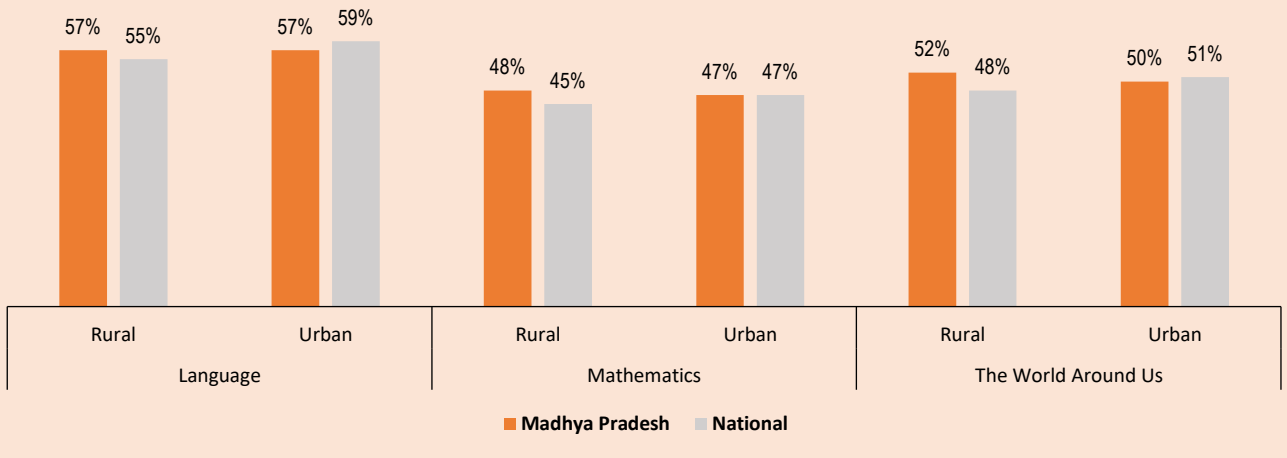

Performance by Gender

Key highlights

- In Language, both boys' and girls' performance were at par with the national average.
- In Mathematics, boys scored 1% higher and girls 2% higher than the national average.
- In The World Around Us, boys scored 1% higher, while girls scored 2% higher as compared to the national average.

Performance by Location

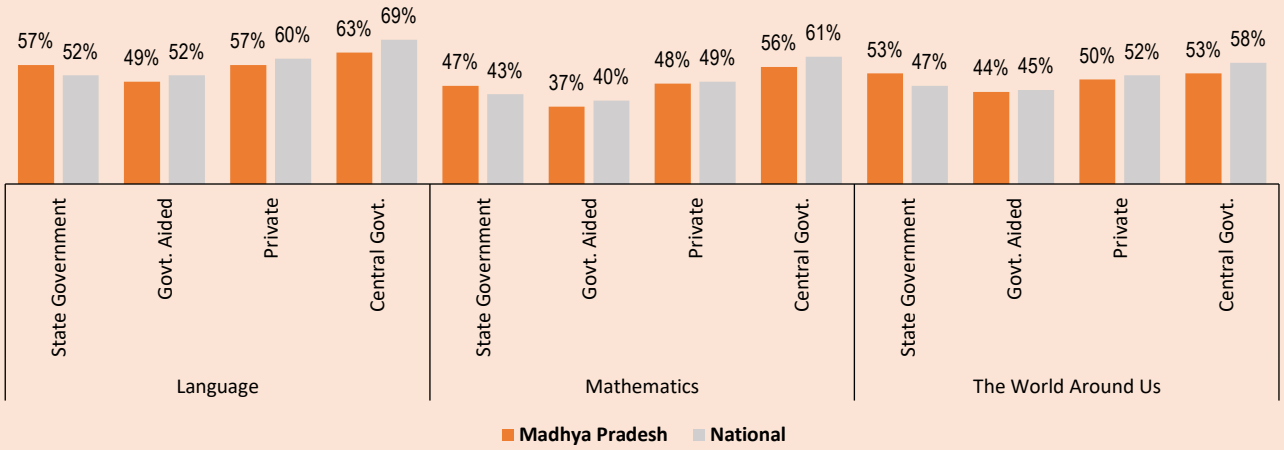

Key highlights

- In rural schools, students scored 2% higher in Language, 3% higher in Mathematics, and 4% higher in The World Around Us than the national average.
- In urban schools, students scored 2% lower in Language and 1% lower in The World Around Us. Students' scores were at par with the national average in Mathematics.

*The mean difference has not been represented statistically.

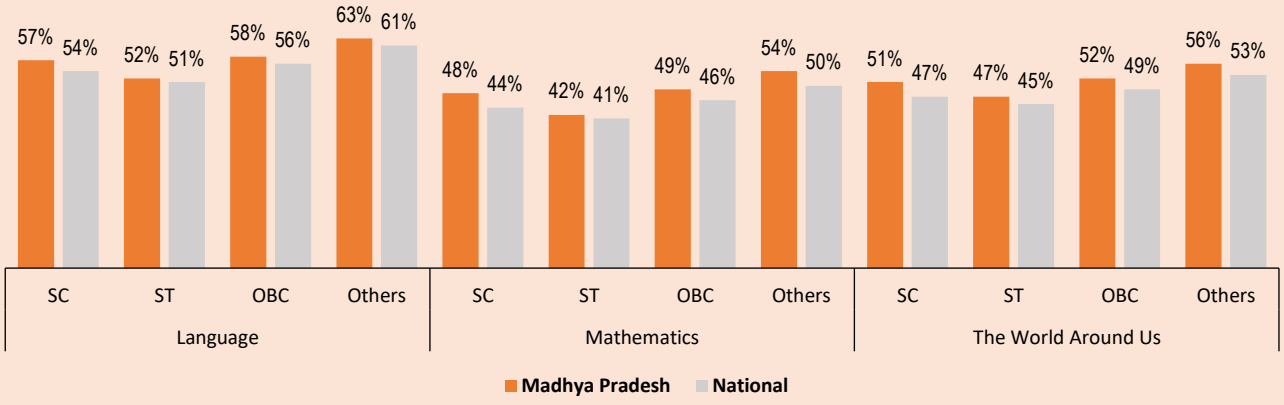

Performance by School Management Type

Key highlights

- In State Government schools, students scored 5% higher in Language, 4% higher in Mathematics, and 6% higher in The World Around Us as compared to the national average.
- In Government-aided schools, students scored 3% lower in Language and Mathematics, and 1% lower in The World Around Us as compared to the national average.
- In Private schools, students scored 3% lower in Language, 1% lower in Mathematics, and 2% lower in The World Around Us as compared to the national average.
- In Central Government schools, students scored 6% lower in Language, and 5% lower in Mathematics as well as The World Around Us as than the national average.

Performance by Social Group

Key highlights

- Among SC students, scores were 3% higher in Language, and 4% higher in Mathematics as well as in The World Around Us than the national average.
- Among ST students, scores were 1% higher in Language and Mathematics, and 2% higher in The World Around Us than the national average.
- Among OBC students, scores were 2% higher in Language and 3% higher in both Mathematics as well as in The World Around Us than the national average.
- Among students from other social groups, scores were 2% higher in Language, 4% higher in Mathematics, and 3% higher in The World Around Us than the national average.

*The mean difference has not been represented statistically.

Competency-wise Performance (Grade 6)

The tables below show the average percentage of correctly answered questions related to each competency in the state, compared to the national average. For example, in competency C-2.1 (Language, Grade 6) in Madhya Pradesh, the state average of 56% represents the proportion of correctly answered questions, while the national average for same competency was also 56%.

Language

Competency Code	Competency Description	State	National
C-2.1	Applies varied comprehension strategies (inference, prediction, visualisation) to understand different texts	56%	56%
C-2.2	Understands main ideas and draws essential conclusions from the material read	59%	58%

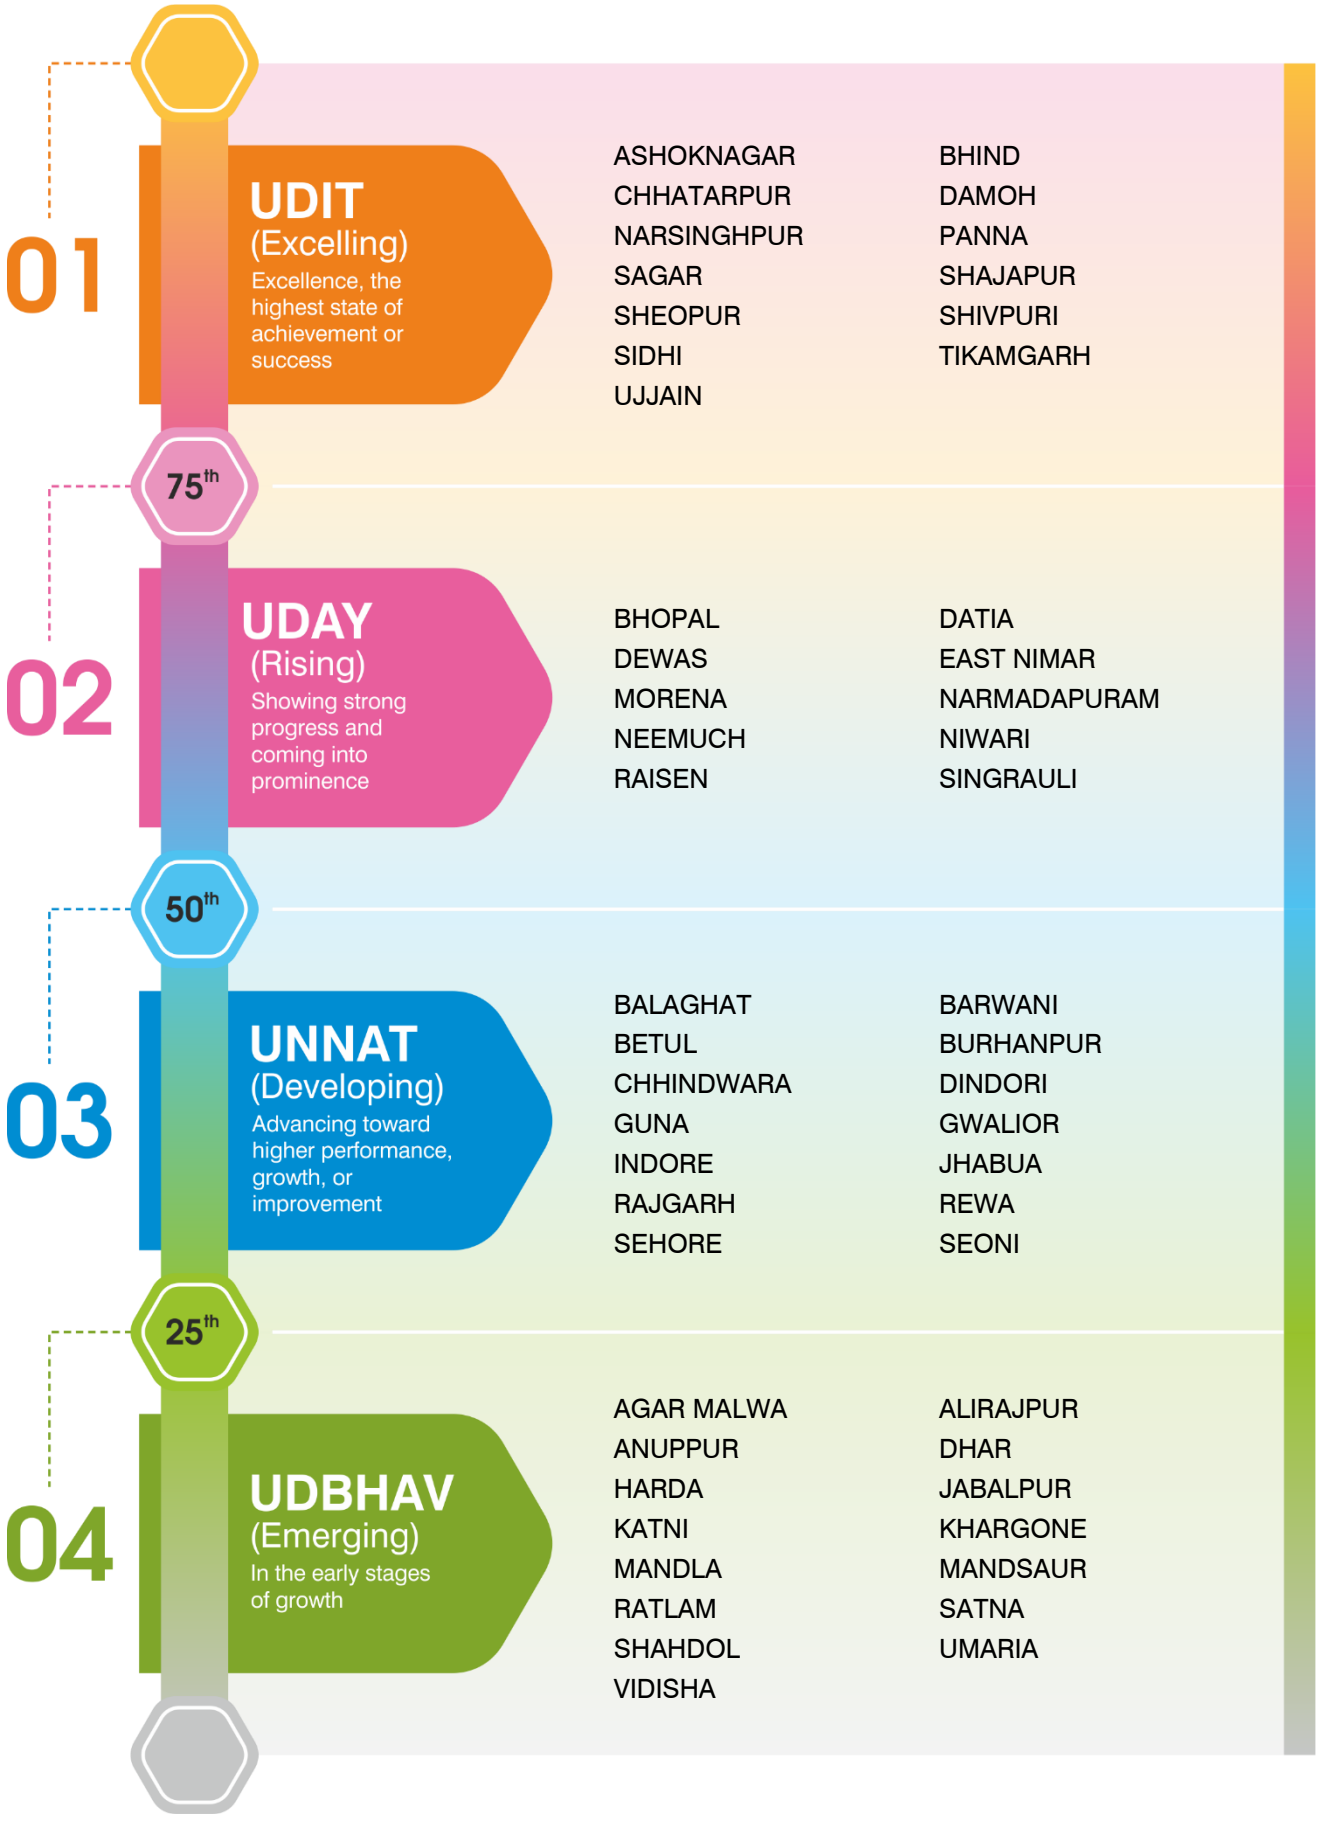

Mathematics

Competency Code	Competency Description	State	National
C-1.1	Represents numbers using the place value structure of the Indian number system, compares whole numbers, and knows and can read the names of very large numbers	54%	54%
C-1.2	Represents and compares commonly used fractions in daily life (such as ½, ¼) as parts of unit wholes, as locations on number lines and as divisions of whole numbers	31%	29%
C-1.3	Understands and visualises arithmetic operations and the relationships among them, knows addition and multiplication tables at least up to 10×10 (Pahade) and applies the four basic operations on whole numbers to solve daily life problems	55%	53%
C-1.4	Recognises, describes, and extends simple number patterns such as odd numbers, even numbers, square numbers, cubes, powers of 2, powers of 10, and Virahanka–Fibonacci numbers.	53%	49%
C-2.2	Describes location and movement using both common language and mathematical vocabulary; understands the notion of map (Najri Naksha)	43%	41%
C-2.4	Discovers, recognises, describes, and extends patterns in 2D and 3D shapes	50%	48%
C-3.3	Carries out simple unit conversions, such as from centimetres to metres, within a system of measurement	40%	38%
C-3.5	Devises strategies for estimating the distance, length, time, perimeter (for regular and irregular shapes), area (for regular and irregular shapes), weight, and volume and verifies the same using standard units	44%	42%
C-4.1	Solves puzzles and daily-life problems involving one or more operations on whole numbers (including word puzzles and puzzles from 'recreational' areas, such as the construction of magic squares)	40%	38%
C-4.3	Selects appropriate methods and tools for computing with whole numbers, such as mental computation, estimation, or paper pencil calculation, in accordance with the context	51%	49%

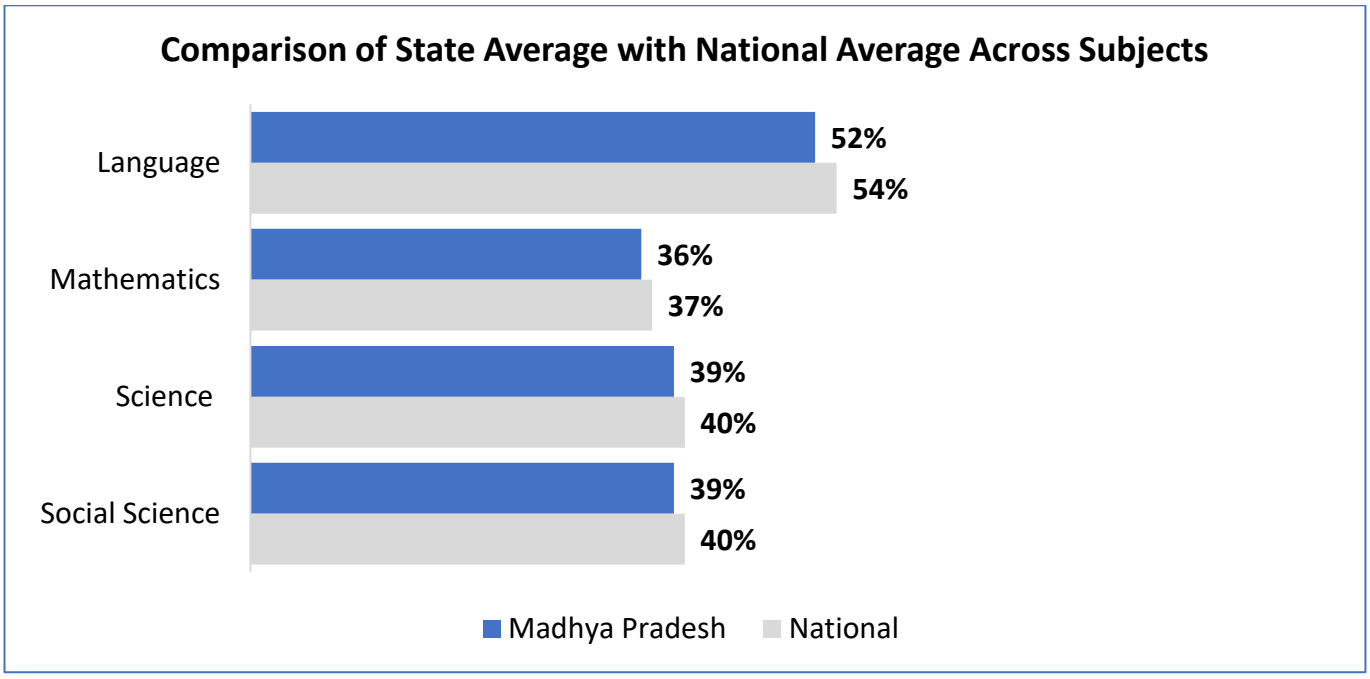

The World Around Us

Competency Code	Competency Description	State	National
C-1.1	Observes and identifies the natural (insects, plants, birds, animals, geographical features, sun and moon, stars, planets, natural resources) and social (houses, relationships) components in their immediate environment	46%	44%
C-1.3	Asks questions and makes predictions about simple patterns (season change, food chain, phases of the moon, movement of stars and planets, shapes of trees, plants, leaves, and flowers, rituals, celebrations) observed in the immediate environment	41%	38%
C-1.4	Explains the functioning of local institutions (family, school, bank/post office, market, and panchayat) in different forms (story, drawing, tabulating data, reports), and analyses their roles	58%	56%
C-2.1	Identifies natural and human-made systems that support their lives (water supply, water cycle, river flow systems, seasons, life cycle of plants and animals, food, household items, transport, communication, electricity in the home)	51%	51%
C-2.2	Describes the relationship between the natural environment and cultural practices in their immediate environment (nature of work, food, festivals, traditions)	39%	38%
C-3.1	Describes the basic safety needs and protection (health and hygiene, food, water, shelter, precautions, awareness of emergency situations, abuse, and unsafe situations) of humans, birds, and animals	59%	57%
C-3.2	Discusses how to prepare for emergency situations (smoke, fire, small injuries, burns, electrical safety, unseasonal rains, fallen trees) based on discussions with family and community, or personal experiences	49%	45%
C-4.1	Observes and describes diversity among plants, and birds and animals in their immediate environment (shape, sounds, food habits, growth, habitat)	55%	54%
C-4.3	Describes usage of natural resources in their immediate environment	54%	50%
C-4.7	Learns about basic social and behavioural norms, values, and dispositions that benefit our social and natural environments and that help our society function smoothly (using dustbins, standing in queues, conserving water, using public transportation, keeping one's environment clean, always helping others in need regardless of background)	54%	51%
C-5.3	Reads simple maps of city, state, and country to identify natural and human-made features (well, lake, post office, school, hospital) with reference to symbols and directions	47%	46%

Performance of Districts (in percentile scale) Grade 6

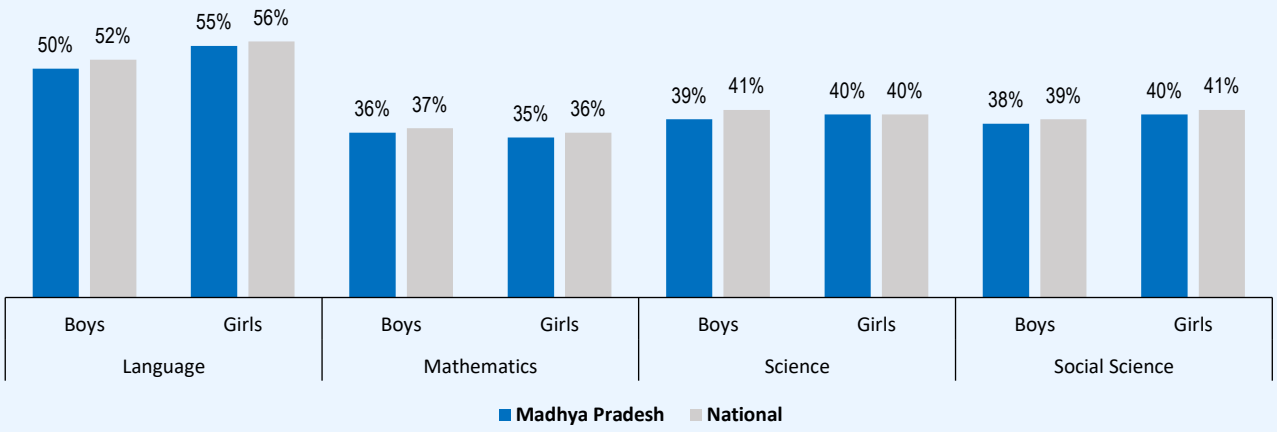

Assessing Middle Stage Competencies (Grade 9)

In **Language, Mathematics, Science, and Social Science**, the average performance of students in **Madhya Pradesh** is below the national average. The performance gap is **2%** in Language, and **1%** in Mathematics, Science, and Social Science.

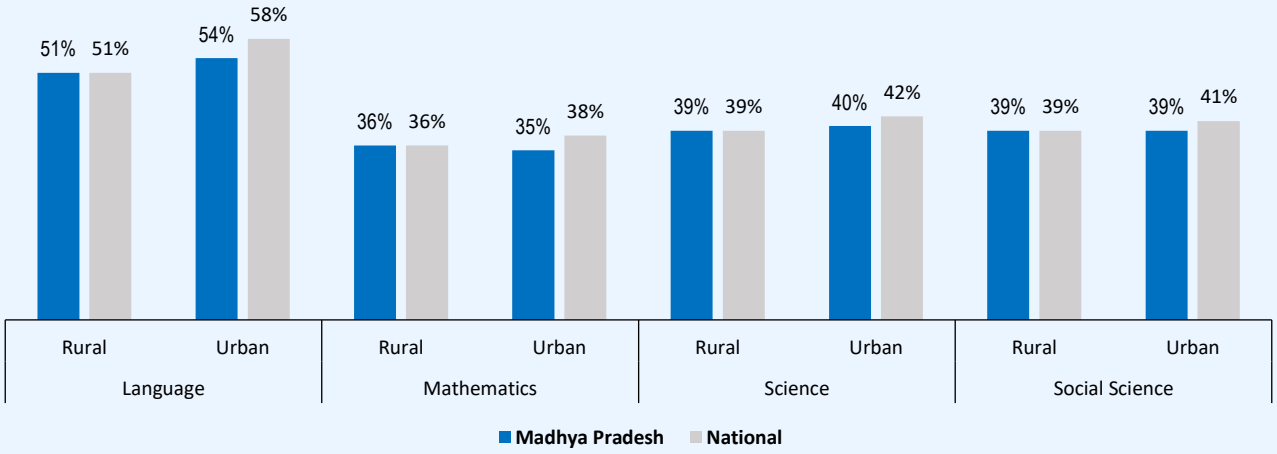

Performance by Gender

Key highlights

- In Language, boys scored 2% lower and girls 1% lower than the national average.
- In Mathematics, both boys and girls scored 1% lower than the national average.
- In Science, boys scored 2% lower and girls' performance was at par with the national average.
- In Social Science, both boys and girls scored 1% lower than the national average.

Performance by Location

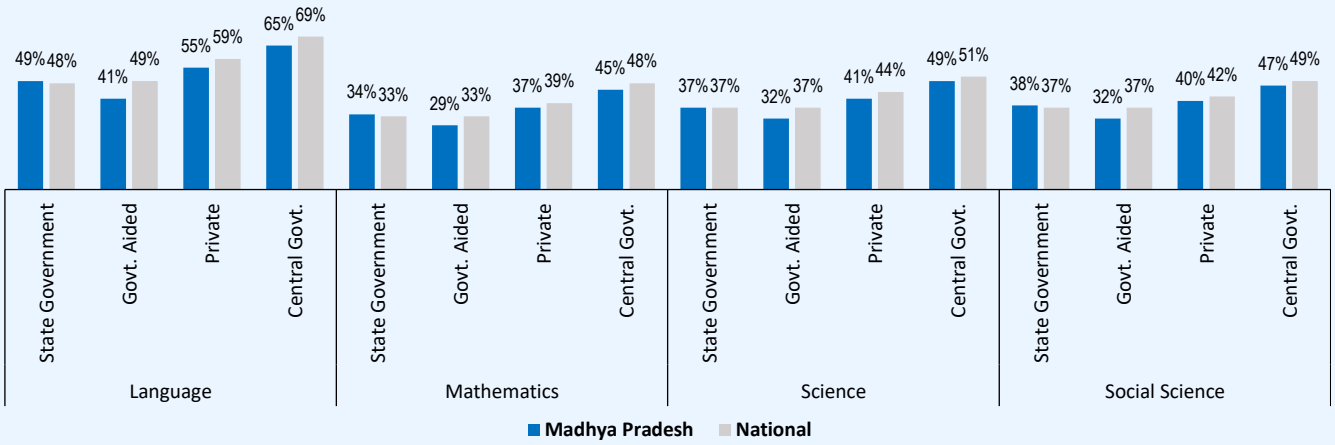

Key highlights

- In rural schools, students' performance was at par with the national average in Language, Mathematics, Science, and Social Science.
- In urban schools, students scored 4% lower in Language, 3% lower in Mathematics and 2% lower in Science as well as in Social Science than the national average.

*The mean difference has not been represented statistically.

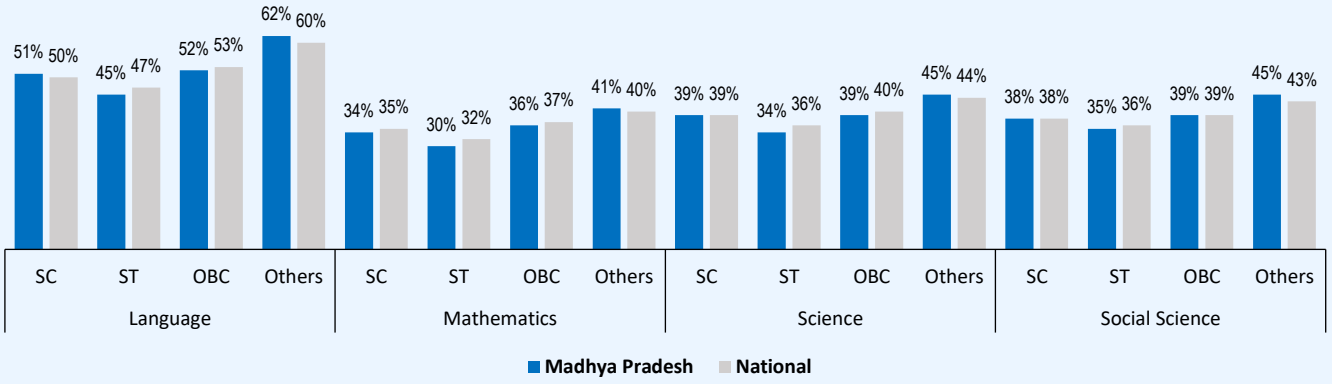

Performance by School Management Type

Key highlights

- In State Government schools, students scored 1% higher in Language, Mathematics, and Social Science. The performance in Science was at par with the national average.
- In Government-aided schools, students scored 8% lower in Language, 4% lower in Mathematics, and 5% lower in Science as well as in Social Science than the national average.
- In Private schools, students scored 4% lower in Language, 2% lower in Mathematics and Social Science, and 3% lower in Science than the national average.
- In Central Government schools, students scored 4% lower in Language, 3% lower in Mathematics, and 2% lower in Science as well as in Social Science than the national average.

Performance by Social Group

Key highlights

- Among SC students, scores were 1% higher in Language, 1% lower in Mathematics. The performance in Science and Social Science were at par with the national average.
- Among ST students, scores were 2% lower in Language, Mathematics as well as in Science, and 1% lower in Social Science than the national average.
- Among OBC students, scores were 1% lower in Language, Mathematics, and Science. The performance in Social Science was at par with the national average.
- Among students from other social groups, scores were 2% higher in Language as well as in Social Science and 1% higher in Mathematics as well as in Science than the national average.

*The mean difference has not been represented statistically.

Competency-wise Performance (Grade 9)

The tables below show the average percentage of correctly answered questions related to each competency in the state, compared to the national average. For example, in competency C-1.1 (Language, Grade 9) in Madhya Pradesh, the state average of 52% represents the proportion of correctly answered questions, while the national average for same competency was 54%.

Language

Competency Code	Competency Description	State	National
C-1.1	Identifies main points and summarises from careful listening or reading of the text (news articles, reports, editorials)	52%	54%

Mathematics

Competency Code	Competency Description	State	National
C-1.2	Discovers, identifies, and explores patterns in numbers and describes rules for their formation (e.g., multiples of 7, powers of 3, prime numbers), and explains relations between different patterns	40%	39%
C-1.4	Explores and understands sets of numbers, such as whole numbers, fractions, integers, rational numbers, and real numbers, and their properties, and visualises them on the number line	31%	31%
C-1.5	Explores the idea of percentage and applies it to solve problems	27%	28%
C-1.6	Explores and applies fractions (both as ratios and in decimal form) in daily-life situations	31%	31%
C-2.2	Extends the representation of a number in the form of a variable or an algebraic expression using a variable	42%	44%
C-2.3	Forms algebraic expressions using variables, coefficients, and constants and manipulates them through basic operations	37%	38%
C-2.5	Develops own methods to solve puzzles and problems using algebraic thinking	38%	37%
C-3.2	Outlines the properties of lines, angles, triangles, quadrilaterals, and polygons and applies them to solve related problems	36%	37%
C-3.5	Understands congruence and similarity as it applies to geometric shapes and identifies similar and congruent triangles	39%	40%
C-4.1	Discovers, understands, and uses formulae to determine the area of a square, triangle, parallelogram, and trapezium and develops strategies to find the areas of composite 2D shapes	37%	39%
C-5.1	Collects, organises, and interprets the data using measures of central tendencies such as average/mean, mode, and median	42%	41%
C-6.1	Applies both inductive and deductive logic to formulate definitions and conjectures, evaluate and produce convincing arguments or proofs to turn these definitions and conjectures into theorems or correct statements, particularly in the areas of algebra, elementary number theory, and geometry	27%	29%

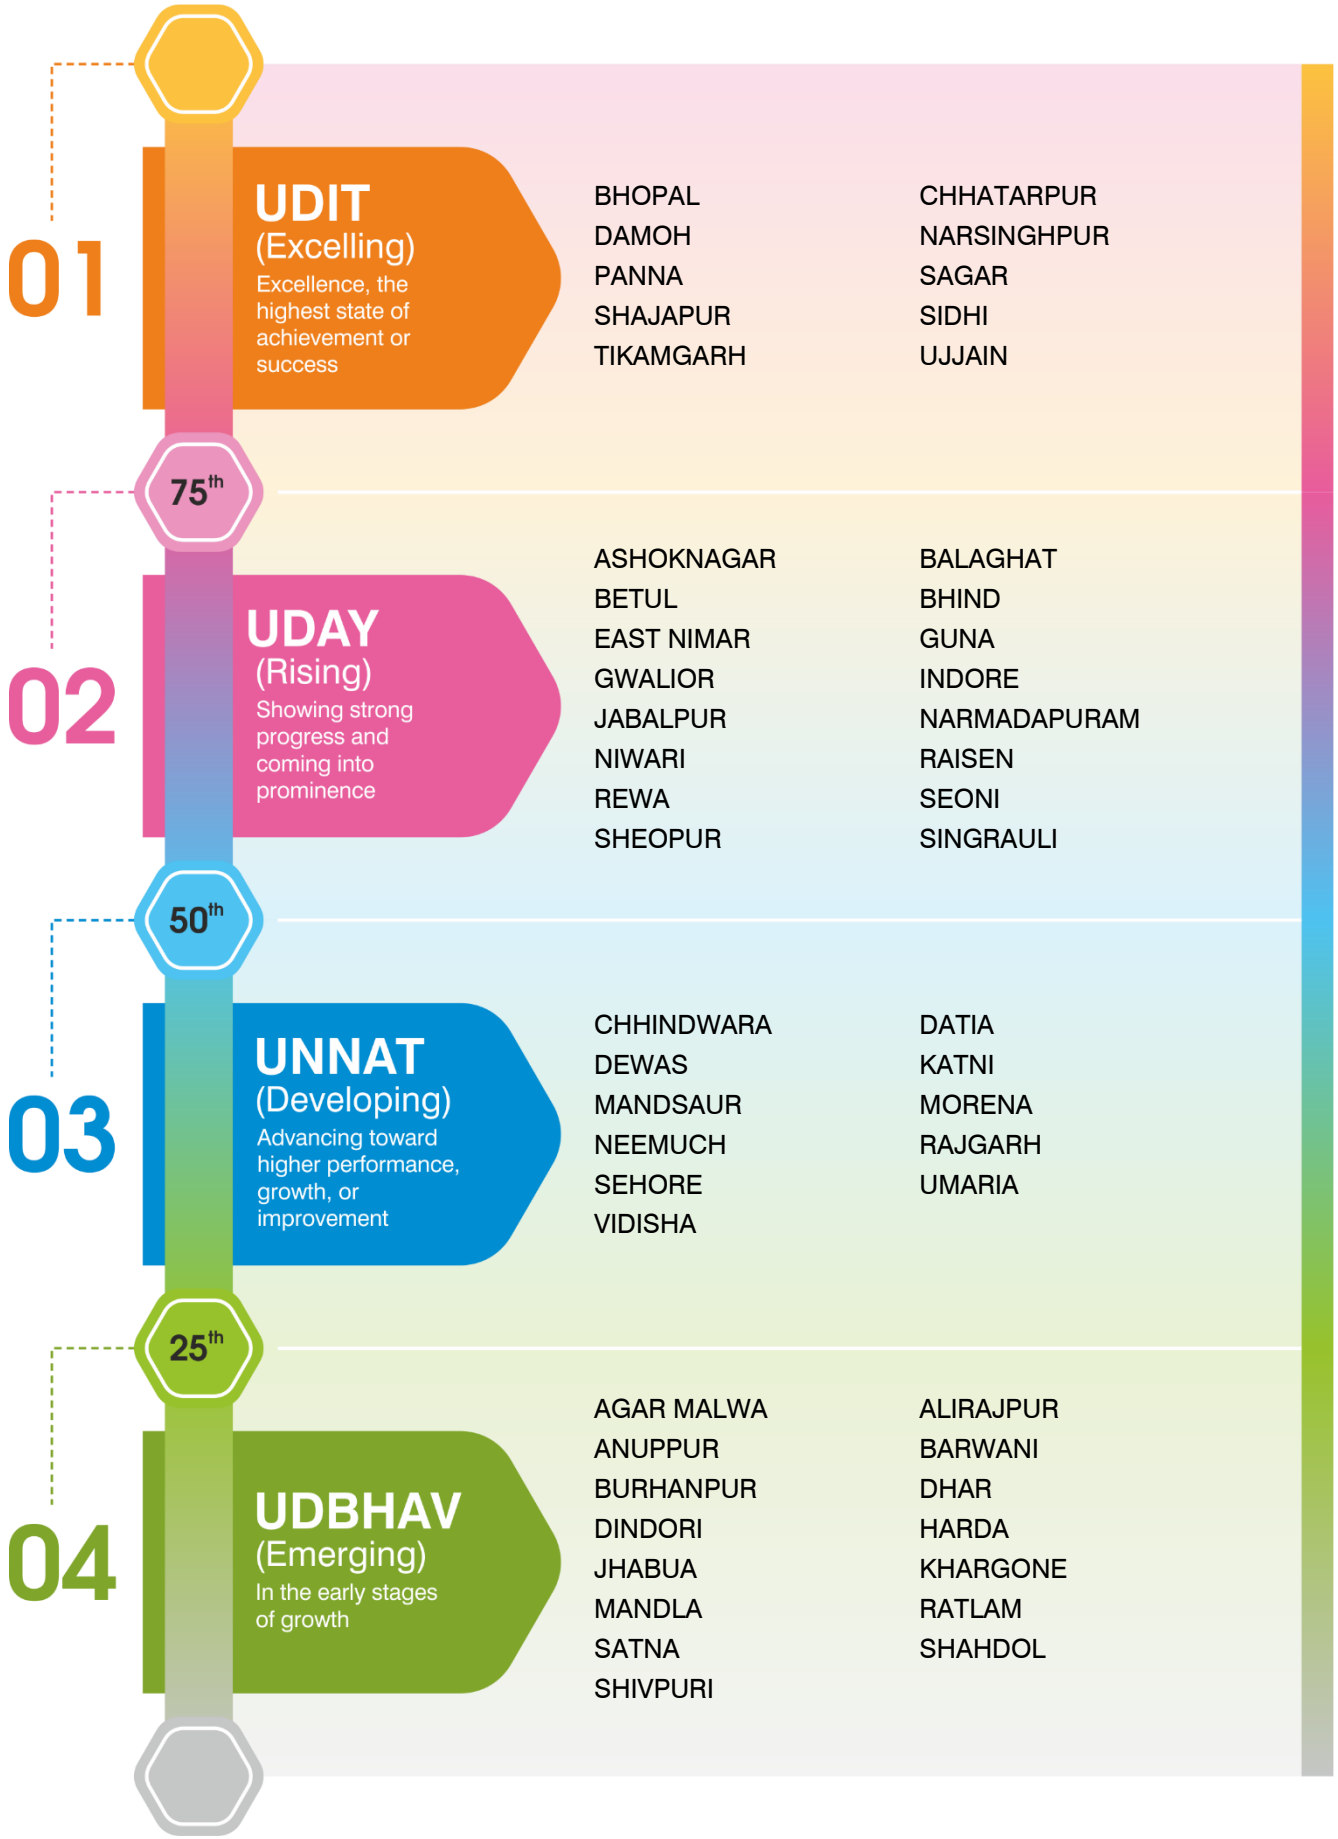

Science

Competency Code	Competency Description	State	National
C-1.1	Classifies matter based on observable physical (solid, liquid, gas, shape, volume, density, transparent, opaque, translucent, magnetic, non-magnetic, conducting, non-conducting) and chemical (pure, impure; acid, base; metal, non-metal; element, compound) characteristics	34%	36%
C-1.2	Describes changes in matter (physical and chemical) and uses particulate nature to represent the properties of matter and the changes	38%	38%
C-1.4	Observes and explains the phenomena caused due to differences in pressure, temperature, and density (e.g., breathing, sinking-floating, water pumps in homes, cooling of things, formation of winds)	36%	37%
C-2.1	Describes one-dimensional motion (uniform, nonuniform, horizontal, vertical) using physical measurements (position, speed, and changes in speed) through mathematical and diagrammatic representations	39%	41%
C-2.2	Describes how electricity works through manipulating different elements in simple circuits and demonstrates the heating and magnetic effects of electricity	31%	33%
C-2.3	Describes the properties of a magnet (natural and artificial; Earth as a magnet)	39%	41%
C-2.4	Demonstrates rectilinear propagation of light from different sources (natural, artificial, reflecting surfaces), verifies the laws of reflection through manipulation of light sources and objects and the use of apparatus and artefacts (such as plane and curved mirrors, pinhole camera, kaleidoscope, periscope)	43%	45%
C-3.1	Describes the diversity of living things observed in the natural surroundings (insects, earthworms, snails, birds, mammals, reptiles, spiders, diverse plants, and fungi), including at a smaller scale (microscopic organisms)	41%	47%
C-3.2	Distinguishes the characteristics of living organisms (need for nutrition, growth and development, need for respiration, response to stimuli, reproduction, excretion, cellular organisation) from non-living things	32%	34%
C-4.1	Undertakes a nutrition-based analysis of food components with special reference to Indian culinary practices and modern understanding of nutrition, and explains the effect of nutrition on health	54%	53%
C-4.3	Describes biological changes (growth, hormonal) during adolescence, and measures to ensure overall well-being	38%	37%
C-7.3	Represents real world events and relationships through diagrams and simple mathematical representations	37%	38%

Social Science

Competency Code	Competency Description	State	National
C-1.1	Collects and interprets multiple sources of information (primary and secondary) to understand the historical, cultural, geographical, and socio-political aspects of human life	33%	32%
C-1.2	Represents and analyses data related to various aspects of human life given in the form of text, tables, charts, diagrams, and maps	51%	53%
C-2.1	Explains and analyses major changes in the past and their impact on society	39%	39%
C-2.2	Recognises elements of the continued prevalence of certain beliefs, relationships, practices, and activities in human society, notwithstanding major changes in society	39%	38%
C-3.1	Analyses the effect of various changes in early human society from nomadism to settled life and early civilisation (such as, the emergence of agriculture, changes in food habits, basic technologies like construction, transport, pottery, metallurgy), and changes in human habitation, family structures and relationships, the nature of work, people's socio-cultural beliefs and concepts over time (e.g., *Ahimsa*, and the fallout of major wars or invasions) that significantly impacted human societies	34%	36%
C-4.2	Assesses the influence of social, cultural, and political institutions on an individual or group or community or society in general	43%	46%
C-6.1	Explains key natural phenomena, such as, climate, weather, ocean cycles, soil formation, the flow of rivers, and how they are spatially distributed	29%	33%
C-6.2	Identifies the distribution of resources, such as, water, agriculture, raw materials, and services across geographies	36%	38%
C-6.3	Analyses Indian perspectives on and efforts towards conservation and sustainability in society, and advocates the importance of the same, and what more needs to be done in these directions including in the context of global climate change	47%	46%
C-6.4	Correlates the existence of different patterns of livelihoods with different types of landforms, availability of resources, and climatic conditions and changes (in local, regional, national, and global contexts)	38%	39%
C-7.1	Explains India's unity in diversity by recognising commonalities in its rich and diverse cultural elements, languages, art, philosophical ideas, values, clothing, cuisines, traditions, festivals, trade, commerce, and health practices including *Ayurveda* and yoga	36%	36%
C-7.2	Discovers the topographical diversity of the Indian landmass from the semi-arid zone in the west and the areas of heavy rains in the north-east to the long coastal areas in the south and the snow-clad mountains in the north, as well as the rich biodiversity of the country	37%	34%
C-8.2	Explains the process of formation of the Indian Constitution and understands the ideas and ideals of the Indian national movement enshrined in it as well as those drawn from India's civilisational heritage	42%	45%
C-8.3	Explains the working of the three tiers of local self-government and appreciates its significance in upholding democracy at the grassroot level	40%	39%
C-9.1	Explains the key elements of trade and commerce (commodity, production, consumption, and capital) and its impact on individual life and society	49%	50%

Performance of Districts (in percentile scale) Grade 9

Recommendations for Targeted Interventions

This subsection presents the gaps identified across three grades and different subjects using the achievement test, pupil questionnaire, teacher questionnaire, and school questionnaire.

1. Bridging the Gaps in Learning Levels

The percentages for competency-wise performance in each grade covered in preceding sections represent the proportion of students in Grades 3, 6, and 9 in Madhya Pradesh who correctly answered questions for each competency in the subjects tested. The percentages offer valuable insights into the students' performance across different competencies, aiding identification of areas that may require targeted support.

Instances where less than 50% of students in the state were able to answer correctly indicate learning gaps. These learning gaps highlight the need for focused interventions to strengthen students' skills, refine instructional strategies, and provide additional learning support. Addressing these areas effectively will help improve overall student learning outcomes in the state.

2. Use of Innovative Assessment Strategies

The use of innovative assessment strategies like peer assessment, self-assessment, portfolio, and project work are keys to effective learning. The following graph illustrates the percentage of teachers who reported using the aforementioned assessment strategies and reported their use as **regularly** or **sometimes**.

Please note, the survey originally included four response options: Never, Rarely, Sometimes, and Regularly. This analysis focuses on the combined percentage of the following categories, regularly and sometimes, to assess the adoption of these assessment strategies.

A **50% benchmark** is used to identify gaps in adoption. Any assessment strategy where less than **50%** of teachers reported using it at least 'Sometimes' is considered an area needing **targeted interventions.**

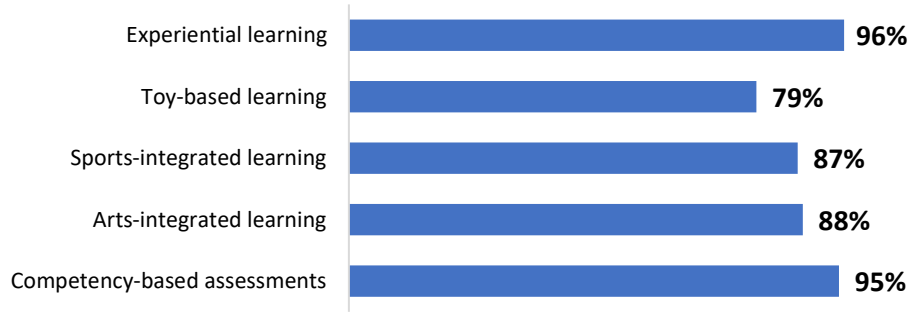

Self-assessment, project work, and peer assessment are commonly used and practiced at a high level. Portfolio-based assessment is also used, but not as much as the other three methods. Schools must consider to provide more training and resources to help teachers effectively incorporate portfolio-based assessment alongside other methods.

3. Integration of Diverse Pedagogical Approaches in Teaching

The integration of diverse pedagogical approaches contributes to the teaching-learning process. The following graph illustrates the percentage of teachers who reported incorporating the following pedagogical approaches: sports integration, arts integration, toy-based, and experiential learning, and reported their use as **regularly** or **sometimes**.

Please note, the survey originally included four response options: Never, Rarely, Sometimes, and Regularly. This analysis focuses on the combined percentage of the following categories, regularly and sometimes, to assess the adoption of these assessment strategies.

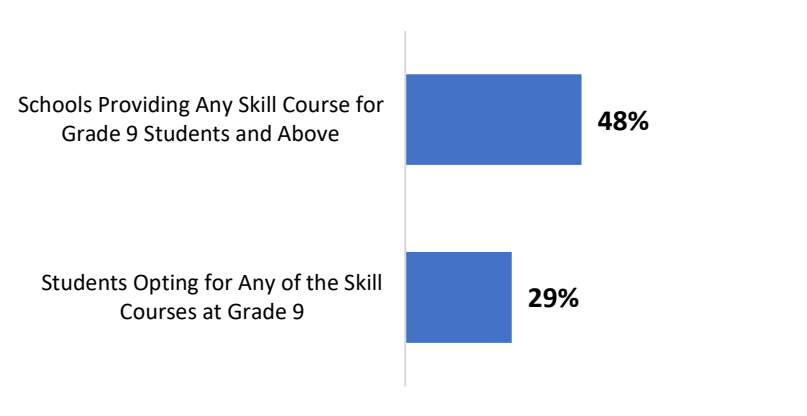

A **50% benchmark** is used to identify gaps in adoption. Any pedagogical approach where less than **50%** of teachers reported using it at least 'Sometimes' is considered an area needing **targeted interventions.**

Classroom practices increasingly reflect the use of experiential learning and competency-based assessments. Arts-integrated and sports-integrated learning are also widely implemented, with both receiving similar levels of attention. In contrast, toy-based learning is adopted less often than the other pedagogical approaches. Teachers must receive targeted training on toy-based learning approaches to help them effectively incorporate this method into their classroom practices.

4. Skill Education in Schools

In the 21st century, skill education equips learners to develop specific job-ready skills and competencies and adapt to the changing workforce requirements. The following table shows the percentage of schools that provide skill courses for students of Grade 9 and above, and students who have opted for skill courses at Grade 9. The responses for both items were reported as **yes** or **no**.

A **50% benchmark** is used to identify gaps. Either criterion where less than **50%** of schools reported as 'Yes' is considered an area needing **targeted interventions.**

The findings highlight the need for greater integration of skill education in schools. Policymakers can use this data to **introduce diverse skill courses**, provide **funding and infrastructure support**, and **raise awareness among students** about career opportunities. Strengthening industry partnerships and aligning courses with job market needs can enhance **skill development and employability**.

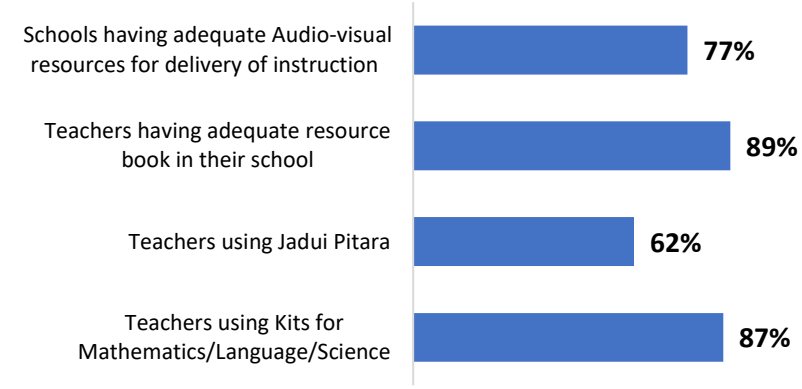

Access to skill-based education for students in Grade 9 and above is limited, and only a small number of students in these schools choose to enroll in skill-based courses. Schools may expand the availability of these courses and actively promote them among students through awareness campaigns and career counselling to make these courses more appealing and accessible.

5. Learning-Teaching Material at School

Access to diverse learning and teaching materials plays a crucial role in enhancing the quality of education. A variety of resources, such as audio-visual aids, teacher resource books, subject-specific kits, and interactive learning tools like Jadui Pitara, contribute to making classroom instruction more engaging and effective. These materials help facilitate better understanding, encourage active participation, and enhance the overall quality of education. Ensuring access to diverse and adequate learning resources is essential for fostering an interactive and well-rounded learning environment.

The following graph presents the percentage of schools that have access to essential teaching-learning resources, including textbooks, digital content, and other instructional materials.

A **50% benchmark** is used to identify gaps. Any category where less than 50% of schools reported availability of materials is considered an area requiring intervention.

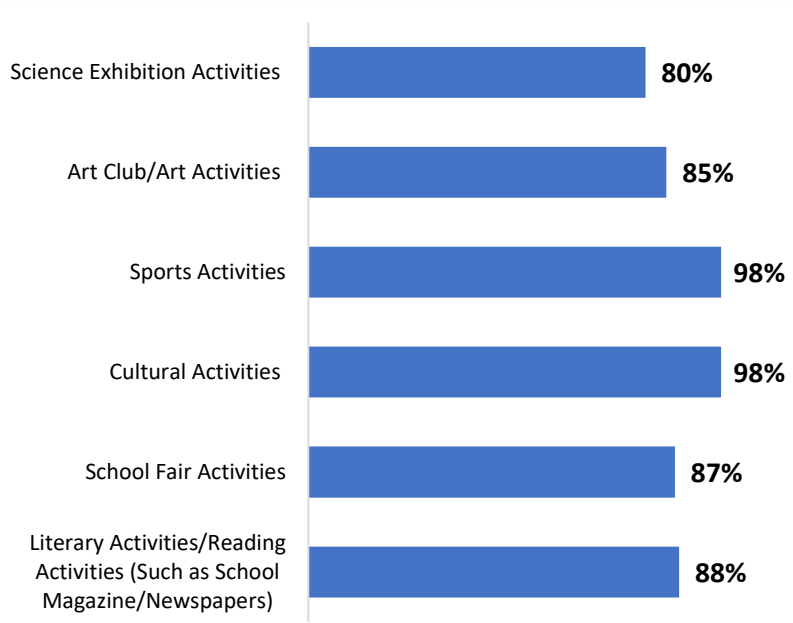

The majority of schools have access to key learning-teaching materials, including teacher resource books and subject-specific kits. Many schools also incorporate audio-visual tools to support instruction. Additionally, over half of the teachers utilize Jadui Pitara in their classrooms. Efforts must be made to ensure that all schools are equally equipped with these resources.

6. Experiential Learning Opportunities in School

Experiential Learning is a core aspect of teaching-learning practices and contributes to active learning. The following graph illustrates the percentage of teachers who reported availability of the following experiential learning opportunities in school: art activities, cultural activities, literary/reading activities, school fairs, science exhibitions, and sports activities, and reported their availability as yes or no.

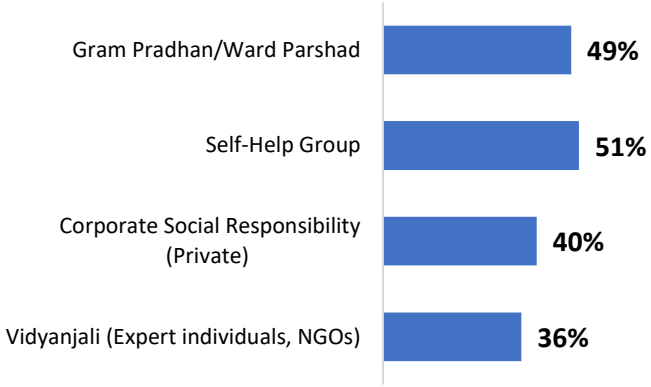

A **50% benchmark** is used to identify gaps in availability. Any experiential learning opportunity where less than **50%** of schools reported its availability as 'Yes' is considered an area needing **targeted interventions.**

Schools provide a broad array of hands-on learning opportunities, particularly in sports and cultural activities. In addition, many schools offer experiences like literary events, school fairs, art programs, and science exhibitions. Schools may expand these experiential learning opportunities by including more of these activities and ensuring equal access for all students, regardless of their background or interests.

7. Community Participation

Active participation by the community plays a crucial role in enhancing the quality of education and overall school development. Support from local governance bodies, NGOs, self-help groups, and Corporate Social Responsibility (CSR) initiatives can contribute significantly to a school's resources and learning environment. The chart below illustrates the current levels of community support in schools, highlighting areas where increased engagement can make a meaningful impact.

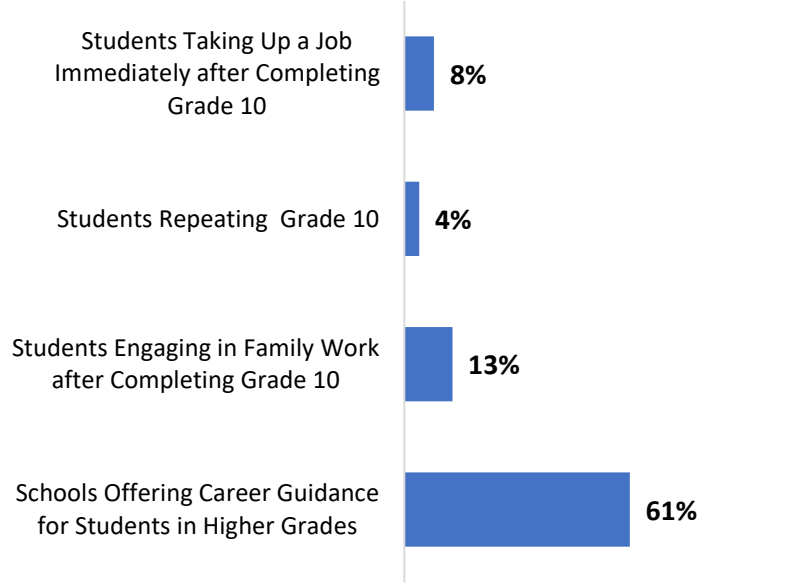

A **50% benchmark** is used to identify gaps in participation of the community.

The community participation is largely driven by self-help groups and local officials like the Gram Pradhan or Ward Parshad. Participation is also supported to some degree by private sector corporate social responsibility efforts and initiatives like Vidyanjali. Schools may strengthen community engagement by fostering partnerships with a wider range of stakeholders, including NGOs and government bodies, to enhance resources and support for educational programs.

8. Students Outside the Educational System

Students exit the education system after Grade 10 because of different reasons like taking up a job, doing a skill course, repeating the grade, and participating in family work. Schools reported the exit of students through percentages (0-25%, 26-50%, 51-75%, 76-100%). E.g., 26-50% of students took up a job.

A **50% benchmark** is used to identify gaps in the system. Aspects that schools reported as 51-75% or 76-100% are considered as areas needing **targeted interventions** to reduce the percentage of students exiting the education system.

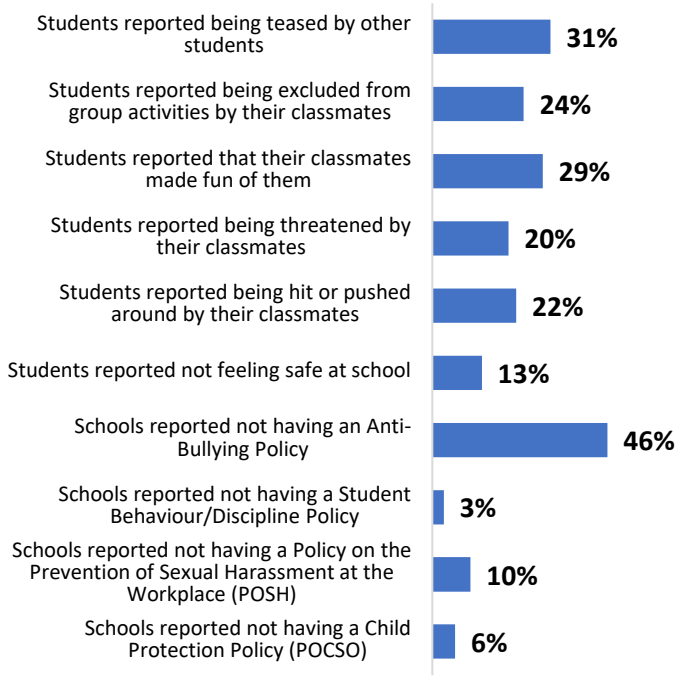

Career guidance is offered in higher grades by half of the schools. However, several students appear to discontinue their formal education after Grade 10, often due to reasons such as assisting with family responsibilities, taking up employment, or repeating the grade. Schools may offer more support and options for students after Grade X to help them continue their education or start a career.

9. Safe and Friendly School Environment

A positive school environment is essential for students' well-being and academic success. The survey findings indicate areas where improvements are needed to promote safety, inclusivity, and emotional security in schools. Strengthening anti-bullying measures, fostering peer inclusivity, and implementing key protection policies can significantly enhance the overall learning experience. The graph below highlights critical areas requiring attention to create a safer and more student-friendly school environment.

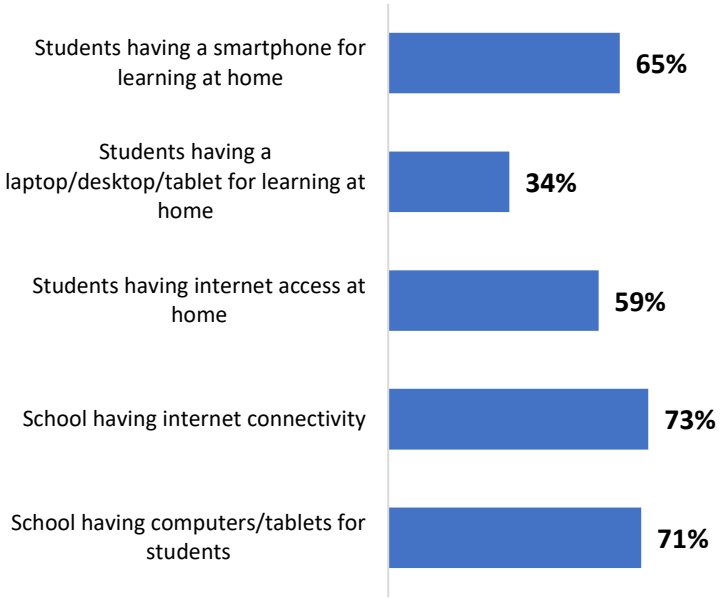

School leaders and/or policymakers must provide special attention to the situations/cases where the proportion reported in the graph is **higher than 50%**.

Instances of students facing teasing, exclusion, and being made fun of by classmates were reported, along with some incidents of being threatened or pushed around. A smaller proportion of students reported feeling unsafe at school. Notably, nearly half of the schools reported the absence of an Anti-Bullying Policy, although gaps in other critical safety-related policies like Student Behaviour/Discipline Policy, POSH Policy, and Child Protection Policy were relatively lower. Schools may consider strengthening anti-bullying measures and sensitization efforts to create a safer and more inclusive environment for all students.

10. Use/Availability of Technology for Better Learning

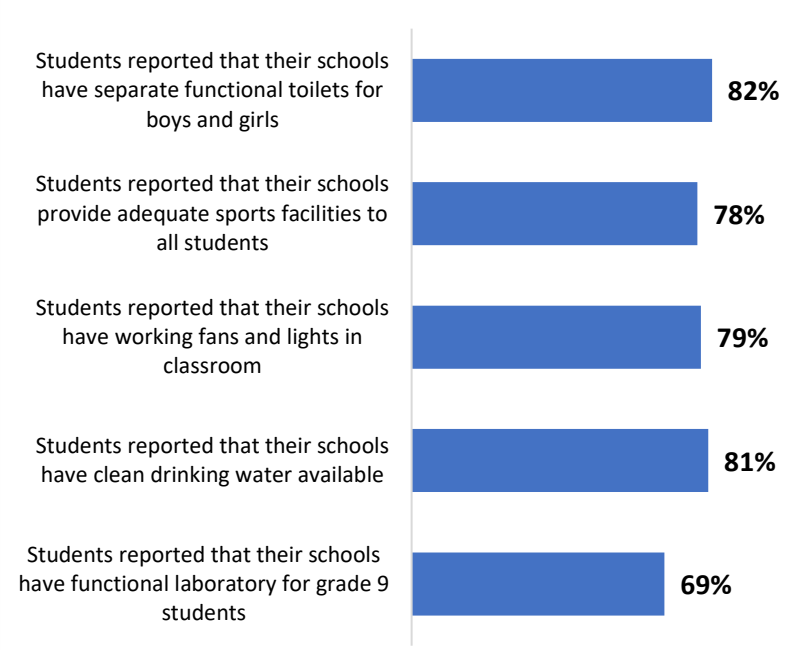

In the last few decades, access to technology has become imperative for effective learning. The graph below illustrates the access to technology and digital devices at school and home. Instances where access is below **50%** need targeted interventions.

While more than half of the students have internet and smartphones at home, only a few have access to laptops, desktops, or tablets. On the other hand, many schools are equipped with internet connectivity and offer digital devices like computers and tablets to support student learning. Schools may consider providing additional support, such as device lending programs or partnerships with local organizations, to ensure all students have access to the necessary technology for their studies.

11. Essential School Facilities

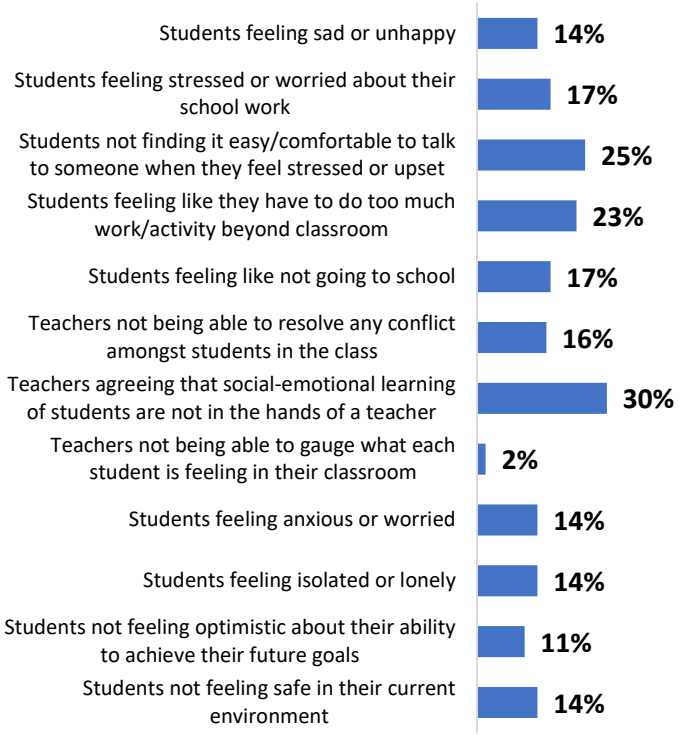

School facilities play an important role in the teaching-learning process. The graph below illustrates the availability of essential school facilities like sports facilities, drinking water, functional fans and lights, science lab, and separate functional toilets. Instances where availability is below **50%** need targeted interventions.

Most students mentioned that their schools have essential facilities, such as separate working toilets for boys and girls, clean drinking water, functional fans and lights in classrooms, and adequate sports infrastructure. Many students also highlighted the presence of fully equipped laboratories for Grade 9. Ensuring that all schools are equipped with science laboratories and maintaining the quality of existing facilities can further strengthen the learning environment.

12. Need to Focus on Social-Emotional Learning

Social-Emotional Learning (SEL) plays a crucial role in students' well-being and academic success. The survey responses highlight areas where **greater attention is needed** to support students' emotional health and equip teachers with strategies to foster a positive learning environment. Schools where less than **50% of students and teachers** report positive SEL experiences should focus on **strengthening mental health support, conflict resolution training, and emotional awareness initiatives**.

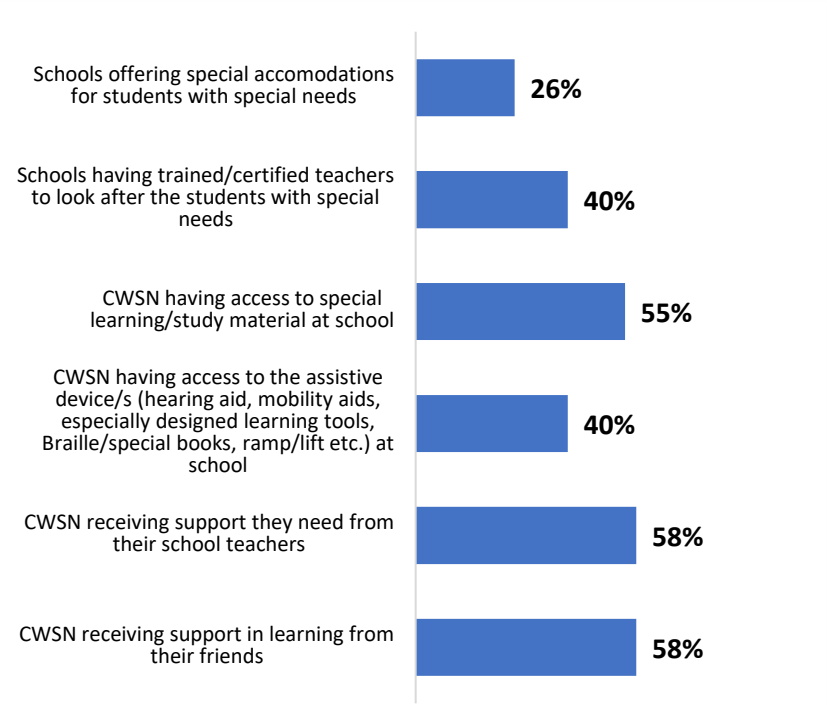

Some students face emotional and psychological challenges, such as struggling to talk to someone when they feel upset or stressed, feeling unmotivated to attend school, or experiencing sadness and stress related to schoolwork. Additionally, a few students report feeling isolated or lonely, unsafe in their environment, anxious, or worried, and lack optimism about their future goals. Outside of school, students also deal with work pressure. Meanwhile, some teachers struggle to address students' social-emotional needs, with a few unable to resolve conflicts among students or recognize their emotional states in the classroom. Strengthening emotional support systems for students and equipping teachers to better recognize and address emotional challenges could contribute to a more supportive learning environment.

13. Inclusiveness at the School Level

Inclusive education is essential for fostering a supportive learning environment where Children with Special Needs (CWSN) receive the necessary accommodations, resources, and support. The table below highlights survey responses regarding inclusivity at the school level.

For areas where less than **50%** of schools currently implement inclusive measures, additional efforts are needed to ensure that all students, including those with special needs, have equal access to learning opportunities. Strengthening teacher training, providing assistive resources, and fostering peer support can significantly enhance inclusivity in schools.

Over half of the students receive assistance from teachers or peers for CWSN and have access to special learning resources at school. Some schools provide assistive devices, and others have trained or certified teachers to support children with special needs. A few schools also offer accommodations for CWSN. Expanding support for CWSN by improving access to specialized resources and ensuring that all teachers are equipped with the necessary training could help in creating a more inclusive and supportive school environment.

14. Continuous Professional Development

Professional development is crucial for empowering teachers and school leaders with modern teaching strategies, leadership skills, and student support techniques. The table below highlights the details of teachers and school leaders participating in the various professional development programmes. A **50% benchmark** is used to identify the gaps. The table highlights the key areas where improvements can be made to ensure effective training and skill-building opportunities for educators.

Description	%
Teachers Participating in Professional Development Programmes in the Last 12 months	**34%**
Teachers Participating in the 'Mentoring and/or Peer Observation and Coaching as part of a formal school management in BRCs/CRCs' activity in the last 12 months	**43%**
Teachers Participating in the ICT related training during the last 12 months	**34%**
School principals/head teachers undergone training on NEP 2020/ NCF-FS 2022/NCF-SE 2023/HPC	**55%**
School principals/head teachers undergone school leadership training programme organized by NIEPA or state government	**43%**
Schools organized teacher training session/workshop on Stress Management in the past two academic years	**66%**
Schools organized teacher training session/workshop on Managing emotions/Emotional Intelligence in the past two academic years	**72%**
Schools organized teacher training session/workshop on Mental Health awareness in the past two academic years	**81%**
Schools organized any teacher training session/workshop on Behavioural Management in a classroom in the past two academic years	**88%**
Schools organized teacher training session/workshop on Managing and understanding Adolescent behaviour in the past two academic years	**83%**
Schools organized teacher training session/workshop for parents around 'understanding their children better/managing their behaviour'	**87%**
Schools offering any regular Professional Development sessions for teaching staff in the past two academic years	**63%**

Schools are making efforts to organize sessions and workshops for both parents and teachers on topics such as understanding and managing adolescent behavior, behavioral management, mental health, stress management, and emotional regulation. More than half of the principals have participated in training related to NEP2020, with some also having undergone school leadership training. However, there is limited involvement of teachers in professional development programs and activities. It is crucial for schools to prioritize ongoing professional development to ensure teachers stay updated with best practices and new teaching methods.
